

BUA - Relay Avvisatore di Retromarcia

The unit, coupled with a buzzer / sound module, produce an audible intermittent warning sound of a vehicle moving in reverse to warn passers-by operators nearby.

Il Relay Avvisatore Retromarcia è un dispositivo di segnalazione sviluppato per aumentare la sicurezza durante le operazioni di retromarcia di veicoli lenti in movimento.

Il dispositivo, abbinato ad un cicalino, genera la segnalazione acustica intermittente in fase di retromarcia avvisando quindi gli operatori nelle immediate vicinanze.

The diagram illustrates the electrical wiring for a vehicle's backup and reverse lights. A battery is connected to a fuse, which then splits to a Backup Light Switch and a Reverse Light. The Backup Light Switch is connected to a Subharness. The Reverse Light is connected to a Connector. The Subharness is connected to a Horn and a ground. The Connector is connected to a ground.
