

# Susol

## Smart Molded Case Circuit Breakers

Susol Smart MCCB, developed by combining digital technology with LS ELECTRIC's power equipment technology accumulated for more than 40 years, has functions for energy consumption and power management. Its relay and metering functions for line protection have been upgraded and it is possible to diagnose and maintain the device by collecting and analyzing data using an accessory device for connectivity.

The move towards energy digitalization is taking place in various fields. By applying Susol Smart MCCB to areas such as renewable energy, building, industry, EV charging infrastructure linked to low voltage, the LSIG relay function can safely protect the line.

### Special features of Susol Smart MCCB

- Relay setting with Fine-tuning available: LSIG (long-time, short-time, instantaneous, ground fault)
- High accuracy meter precision: current +1.0%, voltage +0.5%, power and wattage +2.0%
- Diagnosis and maintenance of equipment
- Reinforced communication function (mobile, RS485, etc.)

# Characteristics of Smart MCCB

## Susol Smart MCCB

Susol Smart MCCB was developed by incorporating digital technology based on the power equipment technology accumulated for over 40 years. The relay and meter functions for line protection have been upgraded, and data can be collected and analyzed using an accessory device for connectivity between low-voltage devices, enabling diagnosis and maintenance of devices.

LS ELECTRIC takes the lead for a smart future with energy digitalization.

### ETU of Susol Smart MCCB has

a variety of electronic trip units like basic type(ETSi) that measures current for each AF and rated current, an advanced type(ETMi) with communication function, and a high-end type(ETHi) that performs communication function and voltage measurement and ETLi type with mobile (BLE) communication.

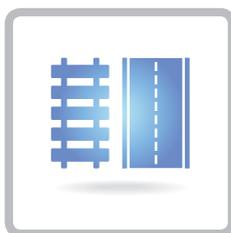

Susol Smart MCCB

### Application field

The move towards energy digitalization is taking place in various fields. By applying Susol Smart MCCB to areas such as renewable energy, building, industry, EV charging infrastructure linked to low voltage, the LSIG relay function can safely protect the line.

Renewable energy

Residential/commercial

Industrial

EV charging infrastructure

### Susol Breakers + Digital Technology

**Digitalization**

- Lower energy cost
- Higher efficiency in operation and maintenance
- Asset management
- Safe use of energy

**LS Smart Distribution Panel Solutions**

Energy Digitalization

### Smart solution

We provide unique smart solutions by applying digital technology to our reliable LS ELECTRIC systems/devices.

# Characteristics of Smart MCCB

## Provide Small and medium-sized smart device-based acceptable energy saving solution

- **Real-time monitoring/control**
  - Energy saving, maintenance cost reduction

Smart MCCB provides a function to safely monitor the electric/energy meter and relay elements of power facilities, and provides real-time remote control and monitoring functions for efficient operation through peripheral devices.

## Provides convenience of ICT-based operation

- **Simplicity**
  - Easy access to user information
  - Convenient installation

- **Connectivity**
  - Ethernet-based standard communication
  - Web monitoring and control

- **Visibility**
  - Provides status information and pre-alarm function

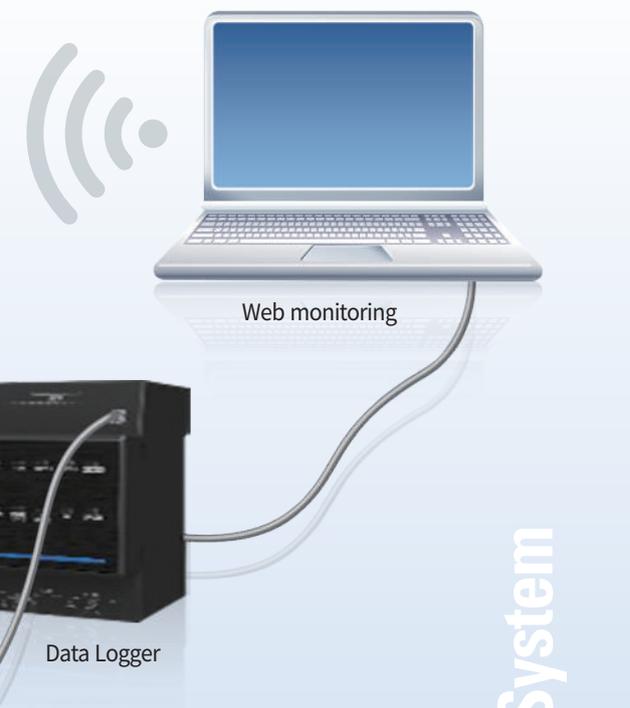

## Smart Mobile Controls

Smart Switchgear offers a short-range wireless Mobile App service to provide on-site monitoring and on-site maintenance convenience.

### Mobile App. Services

- Real-time system and device operation status monitoring
- Provides energy use and failure analysis service measure

Web monitoring

Data Logger

Web Monitoring System

Bluetooth™

Smart Viewer

Smart MCCB

### Provide application for Mobile

- Provides device search and automatic recognition
- Device status and operation information inquiry
- Graphic chart by element

Gridsol CARE is a brand that refers to LS ELECTRIC's integrated digital power facility management service and proposes a new measure for energy management.

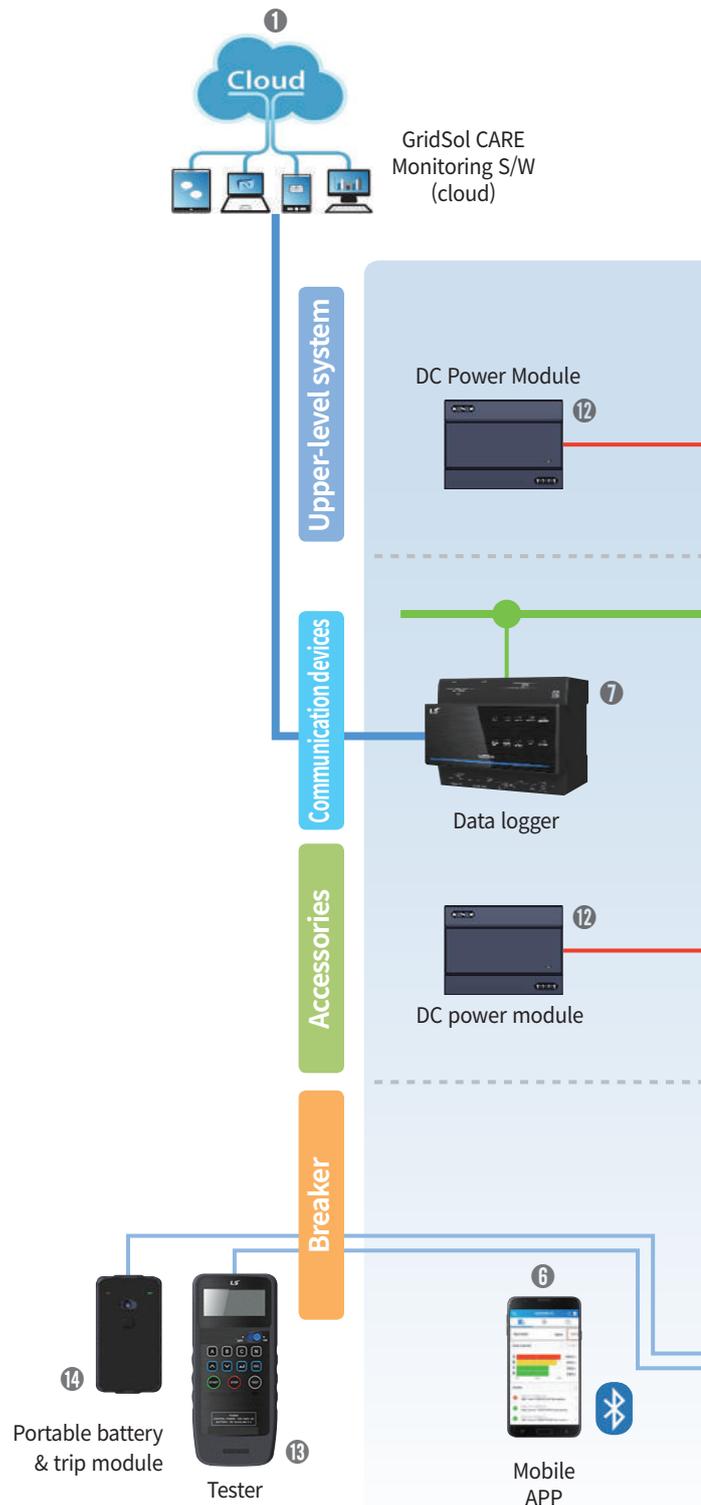

Gridsol CARE consists of upper level system, communication device, accessory device, Smart MCCB, ACB, and MCB. Through Gridsol CARE S/W, we provide a more efficient and stable system operation solution than before by performing power monitoring and control functions remotely.

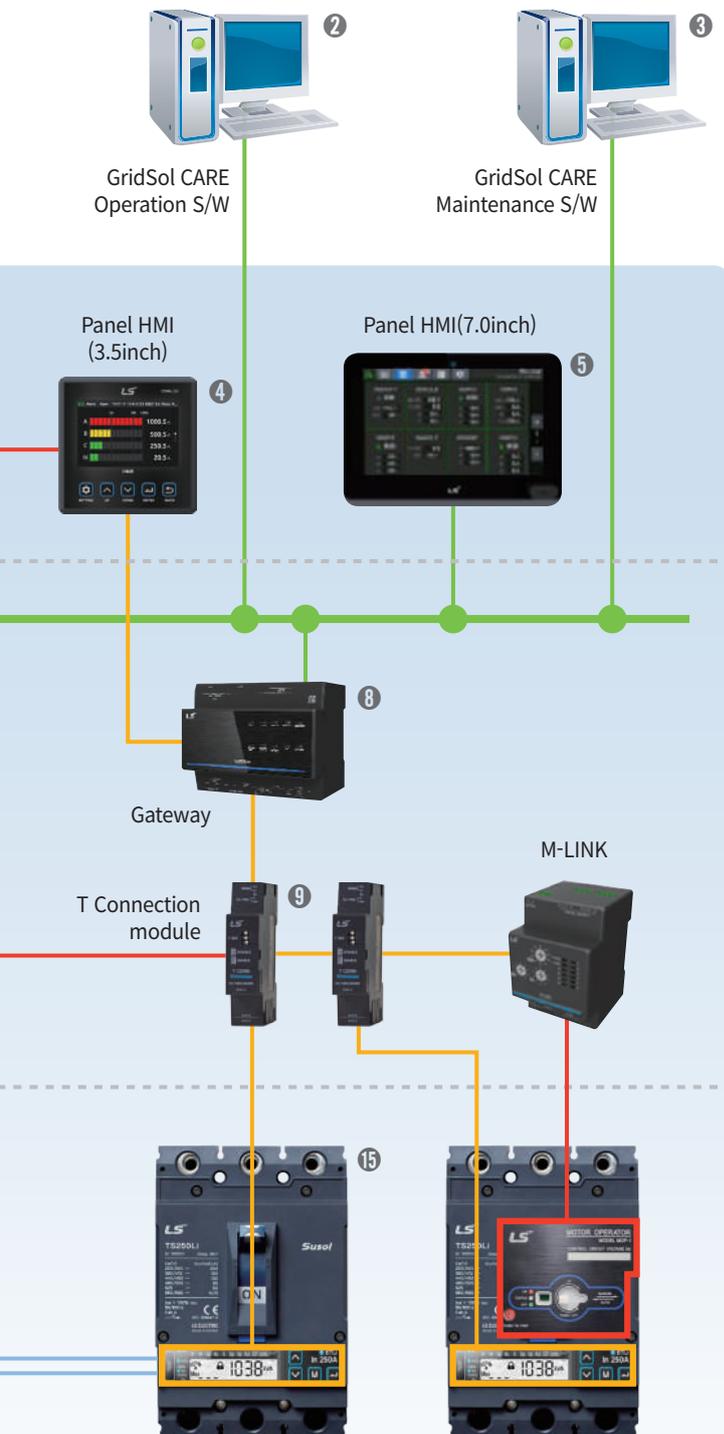

## Upper-level system

- ① **GridSol CARE Monitoring S/W(cloud)**
  - Provides the monitoring function of LV panels by managing the data through a Cloud server (Any Time, Anywhere).
  - Issues alerts when there is a device malfunction through SMS or E-mail.
  - Access energy history and device history information.
- ② **GridSol CARE Operation S/W**
  - Proves the monitoring and control function of LV panels by managing the data through a local server.
- ③ **GridSol CARE Maintenance S/W**
  - Capable of device configuration and control, as well as project engineering.
  - Automatically generates test reports.
- ④ **Panel HMI(3.5inch)**
  - Provides 3.5 inch TFT Color LCD
  - Real-time monitoring and I/O control of connected devices
  - Can connect to up to eight ACBs, MCCBs, or M-Links.
- ⑤ **Panel HMI(7.0inch)**
  - Provides 7 inch TFT Color LCD
  - Provides a Quick View of the device status, communication status, and hierarchy information.
  - Details regarding device monitoring, control, and events.
- ⑥ **Mobile APP(Smart Viewer)**
  - Smart MCCB (ETLi) data monitoring using BLE

## Accessories

- ⑨ **T Connection Module**
  - Making RS-485 Multi-Drop connectivity more convenient
  - Terminal processing available
- ⑩ **M-LINK**
  - Communication module to monitor and control the ON/OFF/Trip of MCCB
    - On/Off Monitoring: Connect an AX/AL add-on.
    - On/Off control: Connect a MOP add-on.
- ⑪ **MOP**
  - An electrically driven opening/closing device that allows remote opening/closing of a breaker.
  - Operation mode: automatic/manual
- ⑫ **DC Power Module**
  - DC 24V output
- ⑬ **Tester**
  - Functions: Calibration, device H/W settings, relay settings, relay tests, device control, system info. access, saving, and accessing test history
  - Test items: the overload long time, short-circuit short-time, instantaneous, ground fault, and PTA of breakers
- ⑭ **Portable Battery & Trip Module**
  - Supplies a Smart MCCB with DC power
  - Verifies the trip operation of Smart MCCBs

**Smart MCCB**

### Communication devices

⑦ **Data Logger**

- Accesses the GridSol CARE LV cloud and transmits the data.
- Includes gateway functions.

⑧ **Gateway**

- Auto discovery, auto time sync
- Periodic data gathering and high-speed response processing
- Non-periodic data bypass
- Webs service support

### Breaker

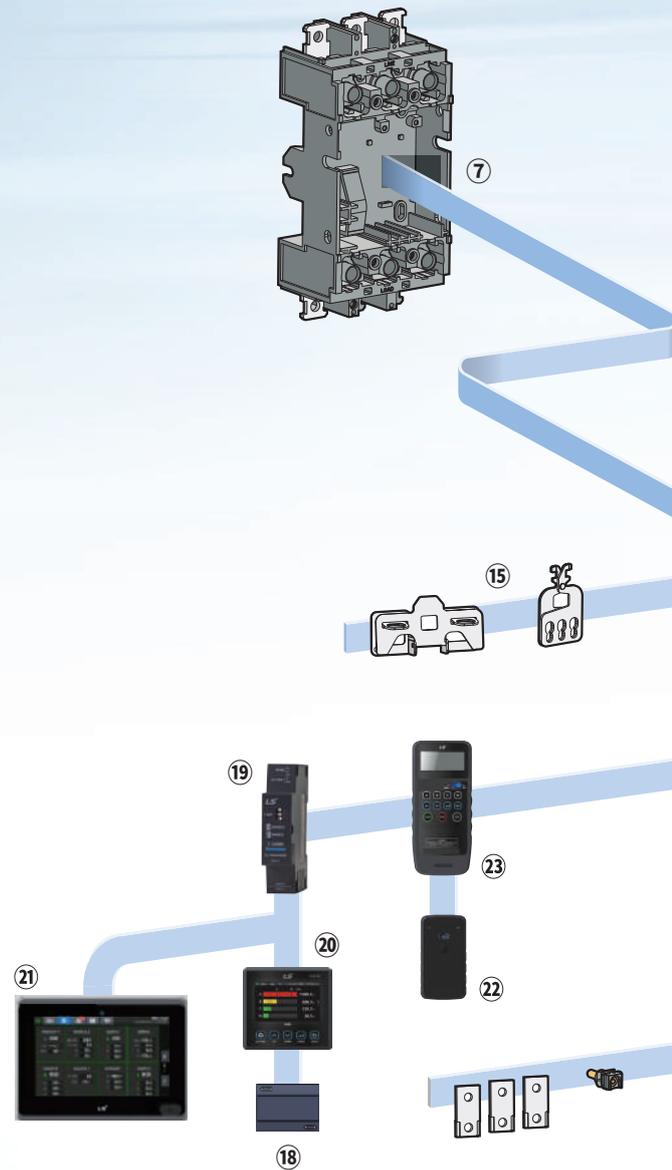

⑮ **Smart MCCB**

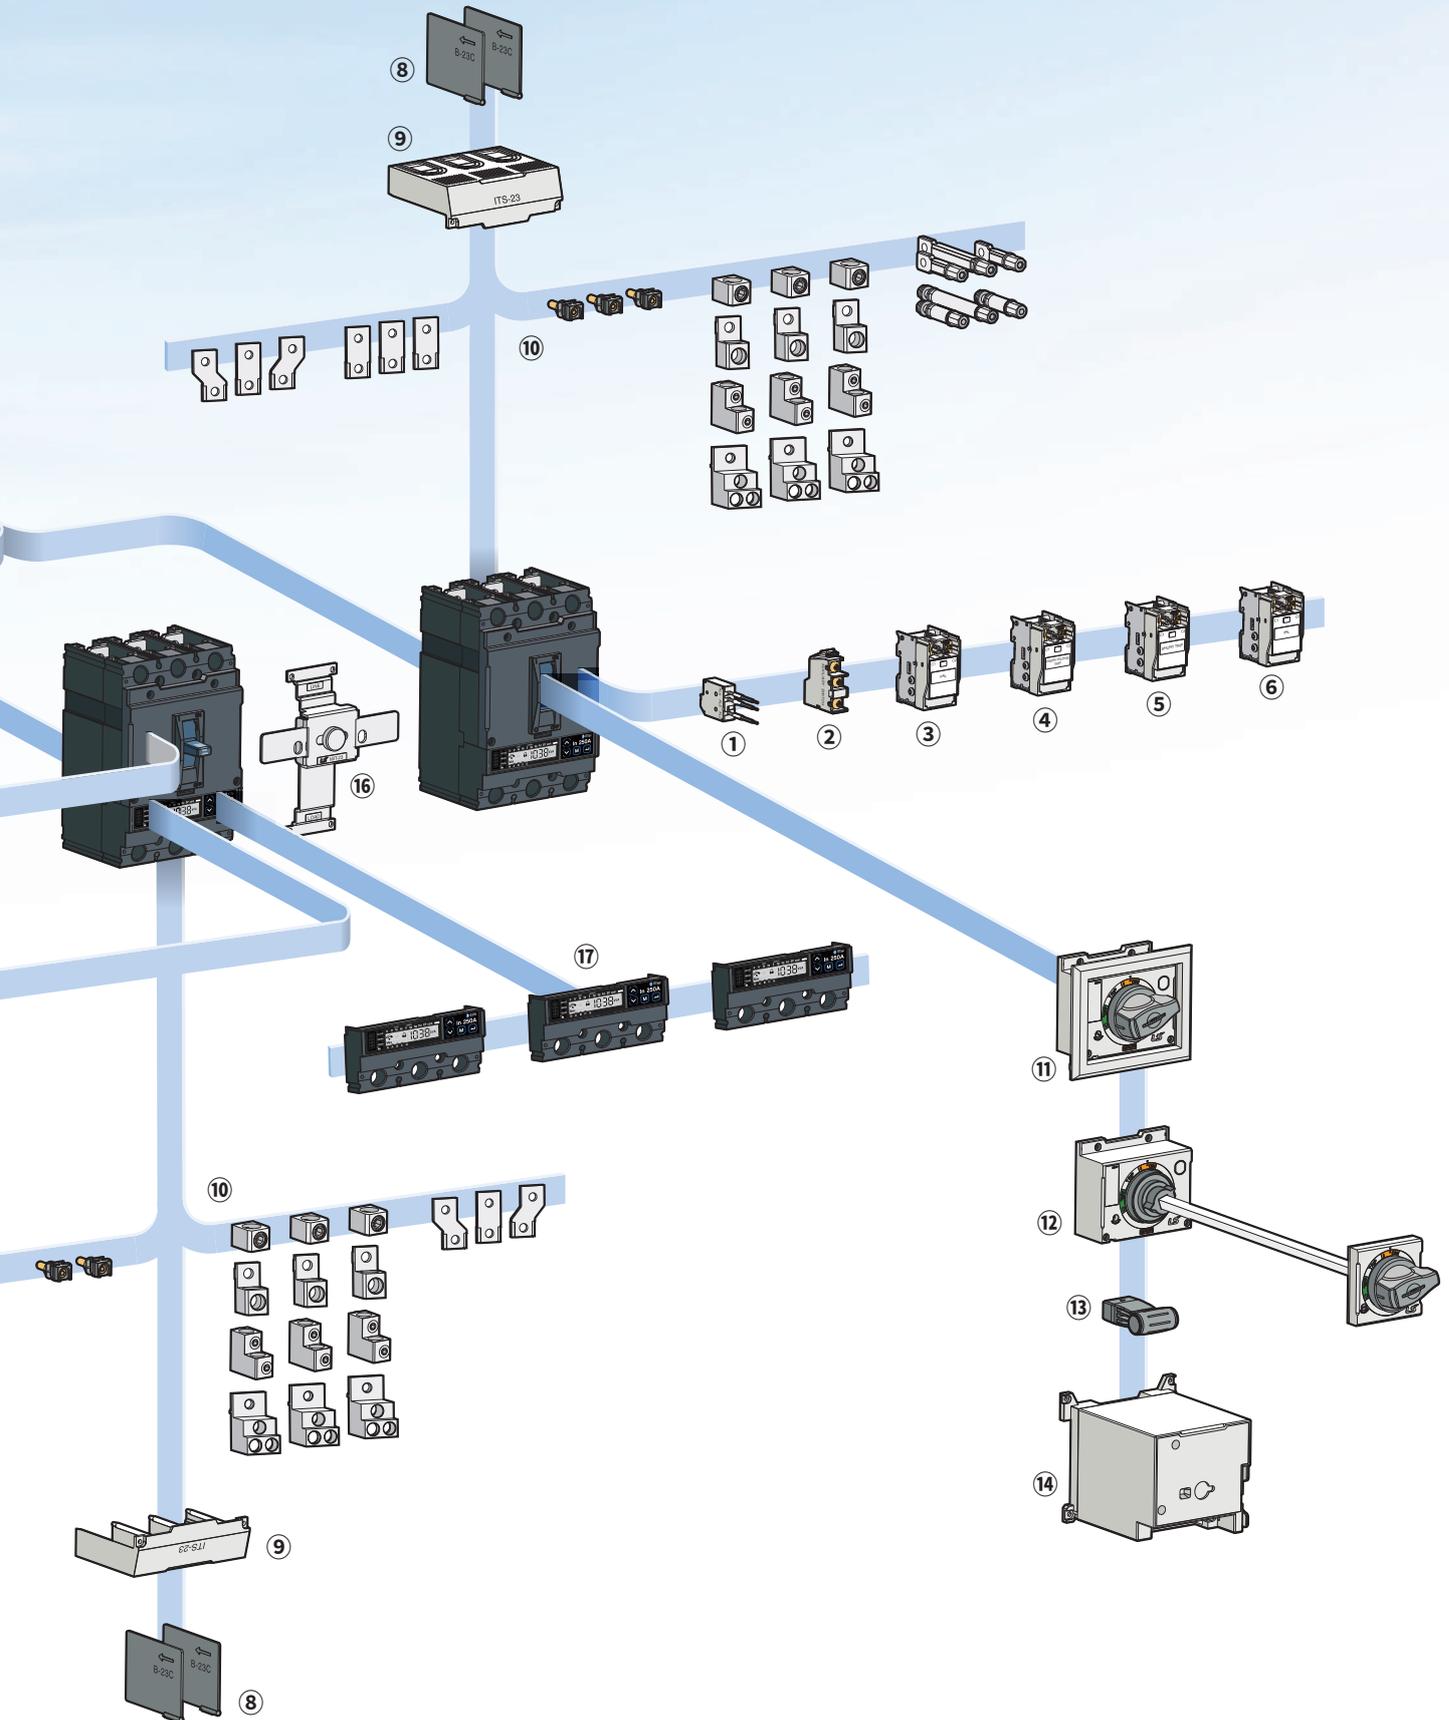

- A Susol MCCB with an ETU (Electronic trip unit)
- Equipped with IoT functions and upgraded measurement precision, measurement items, and relay functions

# Accessories

Use our accessories to upgrade the functions of breakers.  
Our Smart Susol MCCBs are the breakers for systems that provide more diverse and smart accessories compared to existing models.

# Internal structure

A Susol breaker is composed of opening/closing control devices, trip units, contacts, arc extinguishing parts, terminals, and supporting frames.

### ❶ AXL Device

- It is a mechanical S/W that transmits the ON, OFF, and TRIP status of the breaker to the ETU. This device is installed in Smart MCCB with the communication function(ETMi/ETHi/ETLi)

### ❷ Trip Coil

- A device that trips a circuit breaker by receiving the signal from the electronic trip unit.

### ❸ NVT (Neutral voltage tap)

- Device used for voltage and power measurement (ETHi/ETLi) in the Smart MCCB 3-pole trip unit
- N-phase voltage terminal (3 Pole only)

### ❹ EXIO (external power and communication connection)

- Provides convenience when connecting multiple devices to the RS485 multi-drop communication line
- DC 24V/communication

### ❺ ZSI output terminal

- Connecting cables: Awg24~28
- Input terminal Z1, Z2 / Output terminal Z3, Z4

### ❻ NCT input terminal

- Connecting cables: Awg24~28
- Input terminals N1, N2

### ❼ TAL (Trip Alarm)

- External transmission of DC 12V output and breaker status signal according to the relay setting when performing overcurrent relay operation

# Rating

# Smart trip units (ETSi, ETMi, ETHi, ETLi)

## Trip unit exterior

## Trip unit type

ETU of Susol Smart MCCB has a variety of electronic trip units like basic type(ETSi) that measures current for each AF and rated current, an advanced type(ETMi) with communication function, and a high-end type(ETHi) that performs communication function and voltage measurement and ETLi type with mobile (BLE) communication.

### ETSi (Standard)

### ETMi (Multi-Function)

### ETHi (High-Performance)

### ETLi (Limited)

- **ETSi**  
Standard/LSIG relay, current measurement
- **ETMi**  
Multi-function/LSIG relay, current measurement, communication function
- **ETHi**  
High performance/LSIG relay, current/voltage/power measurement, communication function
- **ETLi**  
Limited performance/LSIG relay, power measurement, communication function, mobile communication

**Trip unit rated current**

AF	Rated current
100AF	40A, 100A
160AF	40A, 100A, 160A
250AF	40A, 100A, 160A, 250A
400AF	250A, 400A
630AF	250A, 400A, 630A
800AF	630A, 800A

**Trip unit features**

## Overcurrent protection relay

Smart MCCB's ETU basically performs relay operation function for long time, short-time, instantaneous and ground fault, and provides an alarm indicating LED related to overcurrent display. Relay item setting for relay operation can be set by using the button on the front of ETU. To change the relay action setting, press the 'unlock' button, change the setting in the 'unlock' state (🔓) and after completing the setting, press the 'unlock' button to switch to the 'lock' state (🔒). During the setting change, if there is no button input for more than 1 minute, the device automatically switches to the 'lock' state (🔒).

Type		ETSi	ETMi	ETHi	ETLi
Relay setting	$I_r, t_r, I_{sd}, t_{sd}, I_i, I_g, t_g$	●	●	●	●

## Characteristic curve

- 1) Overload protection(Long time): The operating current ( $I_r$ )and operating time ( $t_r$ ) can be set.
- 2) Short-circuit protection(Short time): The operating current ( $I_{sd}$ ) and operating time ( $t_{sd}$ ) can be set.
- 3) Instantaneous protection: The operating current ( $I_i$ ) can be set.
- 4) Ground fault protection: You can set whether to use ground fault relay, operating current ( $I_g$ ) and operating time ( $t_g$ ).
- 5) N - phase protection: N-phase protection relay can be set for a 4Pole.
  - Off: No protection
  - 100%: N-phase protection for  $100\% \times I_r$
  - 50%: N-phase protection for  $50\% \times I_r$
  - OSN: When  $I_r$  is set to ' $<0.63 \times I_n$ ', N-phase protection for  $160\% \times I_r$  (Used under load conditions that contain a lot of harmonics)
- 6) ZSI (Zone Selective Interlocking: Selective breaking in a protected area.

\* Set the relay so that malfunction does not occur by inrush current.  
(In the case of a motor or capacitor load, inrush current may occur several times of the rated current.)

## Relay specification table

Protection	Setting range								Remark	
Long time protection	Current setting $I_r$ (A)	Rated current		Min( $0.4 \times I_n$ )			Max( $1.0 \times I_n$ )			fine adjustments in 1A step

## Measurement accuracy

- Reference standards: IEC 61557-12
- Current: Three phase (0.2 ~ 0.4I<sub>n</sub> : ± 1.5%, 0.4 ~ 1.2I<sub>n</sub> : ± 1.0%), single phase (0.2 ~ 1.2I<sub>n</sub> : ± 2.0%)
- Voltage: ±0.5%
- Power and Energy: Class 2

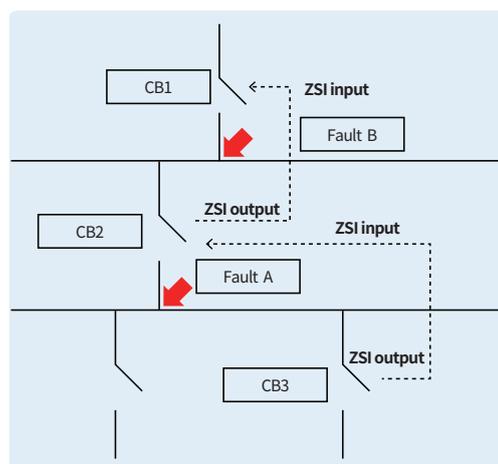

Type		Error range	Error
Power / Energy	PF 1.0	0.2~0.4I <sub>n</sub>	±2.5%
		0.4~1.2I <sub>n</sub>	±2.0%
	PF 10	0.4~0.8I <sub>n</sub>	±2.5%
	PF 0.5(Lag) PF 0.8(Lead)	0.8~1.2I <sub>n</sub>	±2.0%

## ZSI function

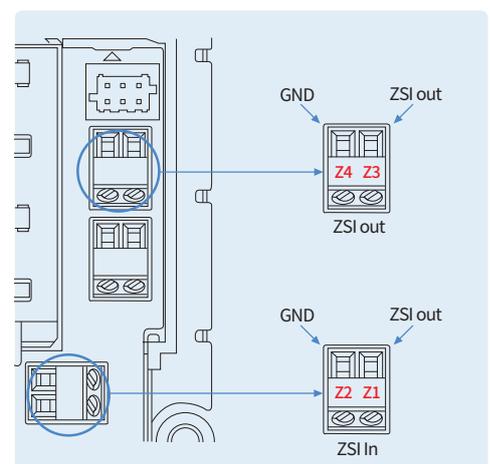

The ZSI function is used to minimize the impact upon MCCB and other electric devices under accident conditions by reducing the delay time which the device eliminates the failure.

- 1) While a short time delay or a ground fault occurs in the system where ZSI is set, the device at the point of failure generates a ZSI signal to suppress the operation of the host(upper) device.
- 2) The MCCB at the point of failure operates at the minimum operating time regardless of the set time to eliminate the fault.
- 3) The upper circuit breaker that receives the ZSI input signal operates according to the set short time delay or the ground fault operation delay time for cascading in the system, but the upper circuit breaker that did not receive the ZSI input signal from the lower circuit breaker operates at the minimum operation time regardless of the set time.

For normal ZSI operation, the operation time must be set correctly for cascading so that lower devices operate before upper devices in case of a short time delay and ground fault.

[ ZSI operation ]

[ External I/O Board ]

※ Whether to use the ZSI function can be set in the ZSI PIN connection status and relay setting mode.

(ZSI use: ZSI pin removed, ZSI not used: ZSI pin fastened)

- When ZSI is set to enable, the ZSI function is activated.

- ZSI input signal is received through External I/O Board input terminal.

# Smart trip units (ETSi, ETMi, ETHi, ETLi)

## Diagnosis and maintenance

Smart MCCB's ETU can save various operation contents such as device operation and setting change. It can also check its contents through communication and HMI.

### Record

#### 1) System event

- Recordable up to 50 events including the type and time of the event
- If it exceeds 50, it is deleted sequentially from the oldest event (Roll-Over)

#### 2) Fault event

- In the event of an accident due to relay operation, up to 50 records including the type and time of occurrence can be recorded.
- If it exceeds 50, it is deleted sequentially from the oldest event (Roll-Over)
- Accident waveform recording: Record up to 2 (current and voltage waveforms, 8 cycles)

#### 3) Max. Demand and Max. Power value

- Record the occurrence value and occurrence time

#### 4) Device operation

- Operation/breaker On (input) time (hour)
- Number of Mechanical/electrical/trip count
- Contacts wear rate (%): wear rate according to the number of electric opening and closing of the main body
- Load Profile (load usage rate): Usage time according to the used load (hour)
- There are 4 levels (0~49%In, 50~79%In, 80~89%In, >90%In)

### Device management

Device information can be obtained by using ETUs with communication function.

- Communication related items (communication address, speed etc.)

## Composition of Smart MCCB

Smart MCCB provides special functions in combination with digital accessory modules. When external power (DC 24V) is applied, data like MCCB status information can be transmitted through communication with the display device or the upper operating S/W. Multi-drop connection of device power and communication is feasible by using the T-Connection module. The portable battery module can be connected to the test port to supply power to the MCCB, and a simple trip test can be performed. In addition, relay test and relay setting are possible by connecting a tester to the test port.

Number	Description	Remarks
①	Smart MCCB	MCCB product
②	ITCM	T-Connection module
③	IPM	DC power module
④	IHM8	Display module
⑤	IPBM	Portable battery & trip module
⑥	Tester71	OCR Tester
⑦	Communication	Higher-level operating software

## Communication

### Remote communication (RS485)

- 1) Communication protocol: Modbus RTU
- 2) Communication speed: 9,600, 19,200, 38,400 bps
- 3) Communication distance: Max. 5m (between devices), can be connected to up to 16 devices
- 4) DC 24V power supplied from outside
- 5) Slave addresses: 1 ~ 247
- 6) Transmitted information: Device status, measurement values, setting information, and record data, etc.

※ Communication available only when there is an outer power supply.

### Tester Port communication

- 1) DC 12V power supplied from outside
- 2) Connected devices: OCR teste, IPBM: Input the relay test current signal.

### BLE communication

- 1) Communication range: 1m (in an open space)
- 2) Transmitted information: Device status, measurement values, setting information, and record data, etc.

※ Communication available only when there is an outer power supply.

\* When the device is re-energized, the device time will be reset to 01:01:01, January 1, 2018.

# Smart trip units (ETSi, ETMi, ETHi, ETLi)

## Trip unit external

Number	Description	Remarks
1	Indicated value	Indicates the relevant information and data value.
2	Unit	The unit of the displayed item.
3	Display mode and settings display	📶(Measurement), Max, ⚙️(Settings), 🔒(Lock), Reset?, OK
4	Display the relay element and other indications	Hz (frequency), EP (external power), com (communication)
5	Indication LED	Active and Alarm LED
6	Test Port	The test port to provide communication and power
7	Each phase and ground fault	G (ground fault)
8	Key Interface	The key to be used in manipulating the screen and change settings.

### Indication LED

Indicates the operation and load status of the device by the change of the color of the LED.

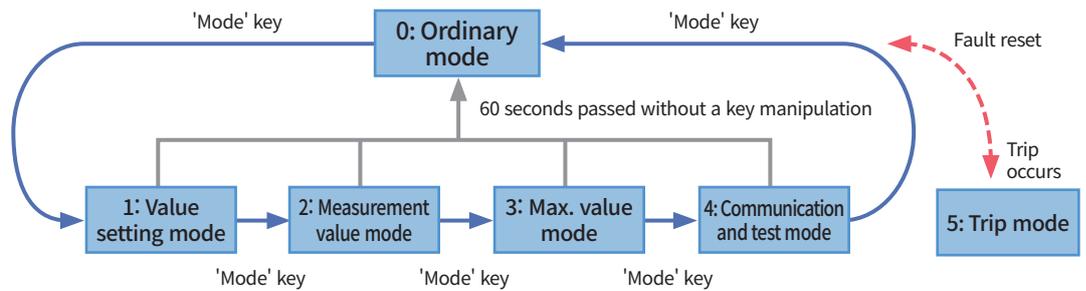

LED	Color	Remarks	
 ACTIVE	Active	Blue	Blinks when there is a failure in engaging external power (DC24V) or self-power operating current.
 >90%I <sub>r</sub>	>90%I <sub>r</sub>	Orange	Blinks when the load current is 90% or higher of the I <sub>r</sub> current setting.
 >105%I <sub>r</sub>	>105%I <sub>r</sub>	Red	Blinks when the load current is 105% or higher of the I <sub>r</sub> current setting.

※ The condition of using self-power  
 - 250AF : Rated power 40A (15A or higher), Rated current 100 ~ 250A (30A or higher)  
 - 630AF, 800AF : 50A or higher

LCD Indication Mode

LCD Display

The ETU indicates the corresponding item for each display mode when the unit is running on external power or self-power.

Item	display item	A sample for indication
Ordinary mode	The current for each phase is indicated in the order of A, B, C, and N.	: Phase A current
Value setting mode	Operating frequency → long time current → long time time → short-time current → short-time time → Instantaneous current → Use of ground fault → Ground fault current → Ground fault time → N-phase protection → Use of ZSI → ...	: tsd setting
Measurement value mode	Current value for each phase → Ground fault current → Va(Vab) → Vb(Vbc) → Vc(Vca) → Active power → Reactive power → Apparent power → ...	: Vrs voltage value
Max. value mode	Current value → Ground fault current → Va(Vab) → Vb(Vbc) → Vc(Vca) → Active power → Reactive power → Apparent power → Forward active energy → Forward reactive energy → Apparent energy → ...	: Max value (T-phase)
Communication and test mode	Communication address → Communication speed → Configuration by communication → DO output selection → Relay display mode selection → Feeder/Incoming → Trip test → ...	: Comm. address
Trip mode	'Trip' → Fault current → ...	: Trip display

# Smart trip units (ETSi, ETMi, ETHi, ETLi)

## Key types

You can manipulate the keys to view the display items on the Led and make changes to settings.

While making changes with the relay settings, you can press the 'Unlock' key or the 'Mode' key twice to exit the mode. Or, you will exit the configuration mode if there is no key operation for 60 seconds, as well.

Number	Description		Remarks
 : Unlock	Engage/disengage the settings edit mode.		Can be used when making changes with the settings.
 : UP	Increase the setting values.		Can be used when making changes with the settings.
 : Down	Decrease the setting values.		
 : Mode	Change the display mode.		Cycle the display mode.
 : Enter	Long (two seconds or longer)	Select and confirm the item.	Can be used to make changes with the settings, resetting the max. values, and run trip tests.
	Short	Change the indicated items	Progressive item display (showing the subsequent items)

## Change settings

You can change the settings of the equipment only when the equipment is in 'unlock' mode.

To change settings, press () to see whether the equipment is in 'unlock' mode.

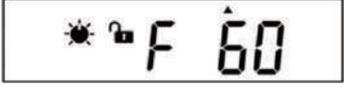

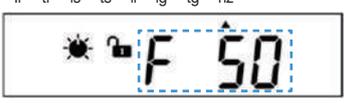

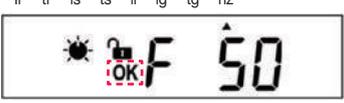

\* The first screen you will see once 'unlock' mode is activated is the operating frequency item of the relay setting mode.

Press Enter to make changes with the relay settings. Press Mode to change system settings. (Page 48)

## Changing the relay configuration

### Changing settings operating frequency

ex) 60Hz → 50Hz

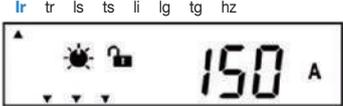

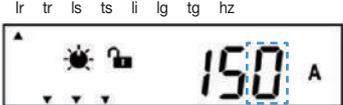

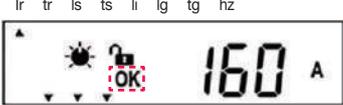

Steps	LCD display	Remarks
	<p>lr tr ls ts li lg tg hz</p> 	Press 'unlock' to display the operating frequency
 (Long)	<p>lr tr ls ts li lg tg hz</p> 	Select the item to change (blink)
 	<p>lr tr ls ts li lg tg hz</p> 	Change the item's value (blink)
 (Long)	<p>lr tr ls ts li lg tg hz</p> 	Confirm the changes you made (shows 'OK')

※ F: Frequency

## Changing the relay configuration

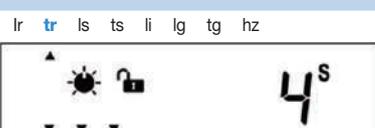

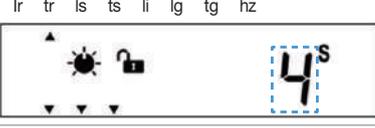

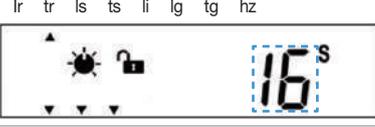

### Change settings long time operating current (I<sub>r</sub>)

ex) 150A → 160A

Steps	LCD display	Remarks
 (short)		Press Enter in the relay setting mode to move to the rated current (I <sub>r</sub> ) item. (See the configuration status in the LCD display.)
 (Long)		Select the item to change (The position where the change is to be made will blink.)
		Move to the position where the setting is to be changed. (The position where the change is to be made will blink.)
		Change the item's value (blink)
 (Long)		Confirm the changes you made (shows 'OK')

### Change settings long time operating time (tr)

ex) 4s → 16s

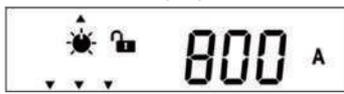

Steps	LCD display	Remarks
 (short)		Press Enter in the relay setting mode to move to the overload long time (tr) item. (Check the LCD display for setting status.)
 (Long)		Select the item to change (blink)
		Change the item's value (blink)
 (Long)		Confirm the changes you made (shows 'OK')

# Smart trip units (ETSi, ETMi, ETHi, ETLi)

## Changing the relay configuration

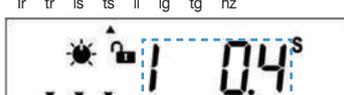

### Change settings short-time operating current (Isd)

ex) 5xlr → 10xlr

Steps	LCD display	Remarks
 (short)	lr tr <b>Is</b> ts li lg tg hz 	Press Enter in the relay setting mode to move to the short-circuit operating current (Isd) item. (Check the setting status in the LCD display.)
 (Long)	lr tr Is ts li lg tg hz 	Select the item to change (blink)
	lr tr Is ts li lg tg hz 	Change the item's value (blink)
 (Long)	lr tr Is ts li lg tg hz 	Confirm the changes you made (shows 'OK')

### Change settings short-time operating time (tsd)

ex) 0.2s(I<sup>2</sup>t Off) → 0.4s(I<sup>2</sup>t On)

Steps	LCD display	Remarks
 (short)	lr tr Is <b>ts</b> li lg tg hz 	Press Enter in the relay setting mode to move to the short-circuit short-time operating time (tsd). (Check the setting status in the LCD display.)
 (Long)	lr tr Is ts li lg tg hz 	Select the item to be changed (blink)
	lr tr Is ts li lg tg hz 	Change the item's value (blink) (The "1" at the beginning stands for the I <sup>2</sup> t On-time.)
 (Long)	lr tr Is ts li lg tg hz 	Confirm the changes you made (shows 'OK')

## Changing the relay configuration

### Change settings instantaneous operating current (Ii)

ex) 10xIn → 12xIn

Steps	LCD display	Remarks
 (short)	Ir tr Is ts <b>Ii</b> Ig tg hz 	Press Enter in the relay setting mode to move to the instantaneous operating current (Ii) item. (Check the setting status in the LCD display.)
 (Long)	Ir tr Is ts Ii Ig tg hz 	Select the item to be changed (blink)
	Ir tr Is ts Ii Ig tg hz 	Change the item's value (blink)
 (Long)	Ir tr Is ts Ii Ig tg hz 	Confirm the changes you made (shows 'OK')

### Change the settings to decide whether to use ground fault or not.

ex) Not Use → Use

Steps	LCD display	Remarks
 (short)	Ir tr Is ts Ii Ig <b>tg</b> hz 	Press Enter in the relay setting mode to move to the settings to enable/disable ground fault. (Check the LCD display for the status of the setting.)
 (Long)	Ir tr Is ts Ii Ig tg hz 	Select the item to be changed (blink)
	Ir tr Is ts Ii Ig tg hz 	Change the item's value (blink)
 (Long)	Ir tr Is ts Ii Ig tg hz 	Confirm the changes you made (shows 'OK')

※ dISA: Disable (Not use)  
 EnbL: Enable (Use)

# Smart trip units (ETSi, ETMi, ETHi, ETLi)

## Changing the relay configuration

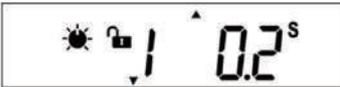

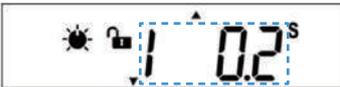

### Change settings ground fault operating current (I<sub>g</sub>)

ex) 0.4xI<sub>n</sub> → 1.0xI<sub>n</sub>

Steps	LCD display	Remarks
 (short)	lr tr ls ts li <b>I<sub>g</sub></b> tg hz 	Press Enter in the relay setting mode to move to the ground fault current (I <sub>g</sub> ) setting. (Check the setting status in the LCD display.)
 (Long)	lr tr ls ts li I <sub>g</sub> tg hz 	Select the item to be changed (blink)
	lr tr ls ts li I <sub>g</sub> tg hz 	Change the item's value (blink)
 (Long)	lr tr ls ts li I <sub>g</sub> tg hz 	Confirm the changes you made (shows 'OK')

### Change settings ground fault operating time (t<sub>g</sub>)

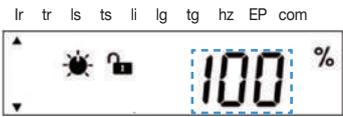

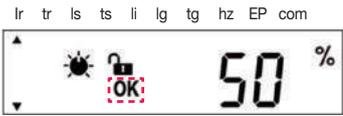

ex) 0.2s(I<sup>2</sup>t On) → 0.4s(I<sup>2</sup>t Off)

Steps	LCD display	Remarks
 (short)	lr tr ls ts li I <sub>g</sub> <b>t<sub>g</sub></b> hz 	Press Enter in the relay setting mode to move to the ground fault activation time (t <sub>g</sub> ) setting. (See the setting status in the LCD display.)
 (Long)	lr tr ls ts li I <sub>g</sub> t <sub>g</sub> hz 	Select the item to be changed (blink)
	lr tr ls ts li I <sub>g</sub> t <sub>g</sub> hz 	Change the item's value (blink) (The absence of the "I" at the beginning stands for the I <sup>2</sup> t Off time.)
 (Long)	lr tr ls ts li I <sub>g</sub> t <sub>g</sub> hz 	Confirm the changes you made (shows 'OK')

## Changing the relay configuration

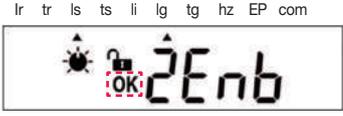

### Changing the N-phase protection settings

ex) 100% → 50%

Steps	LCD display	Remarks
 (short)		Press Enter in the relay setting mode to move to the N-phase protection setting. (Check the status of the setting in the LCD display.)
 (Long)		Select the item to be changed (blink)
		Change the item's value (blink)
 (Long)		Confirm the changes you made (shows 'OK')

### ZSI enable settings change

ex) Disable → Enable

Steps	LCD display	Remarks
 (short)		Press Enter in the relay setting mode to move to ZSI Enable setting. (Check the status of the setting in the LCD display.)
 (Long)		Select the item to be changed (blink)
		Change the item's value (blink)
 (Long)		Confirm the changes you made (shows 'OK')

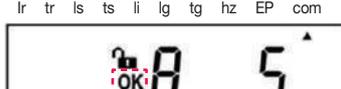

※ Zdl 5: ZSI Disable  
 ZEnb: ZSI Enable

# Smart trip units (ETSi, ETMi, ETHi, ETLi)

## Change system settings

### Changing communication address settings

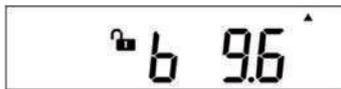

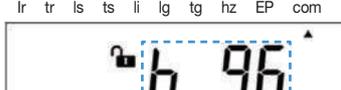

ex) 1 → 5

Steps	LCD display	Remarks
 	<p>lr tr ls ts li lg tg hz EP com</p> 	Press Mode in the relay setting mode to display the communication address setting of the system setting mode. (Check the LCD display for the setting status.)
 (Long)	<p>lr tr ls ts li lg tg hz EP com</p> 	Select the item to be changed (blink).
 	<p>lr tr ls ts li lg tg hz EP com</p> 	Change the item's value (blink)
 (Long)	<p>lr tr ls ts li lg tg hz EP com</p> 	Confirm the changes you made (shows 'OK')

※ A: Address

### Changing the communication speed

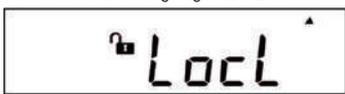

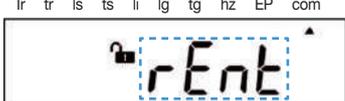

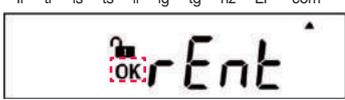

ex) 9,600 → 38,400 bps

Steps	LCD display	Remarks
   (short)	<p>lr tr ls ts li lg tg hz EP com</p> 	Press Mode in the relay setting mode to move to the system setting mode. Then, press Enter to move to the communication speed setting. (Check the status of the setting in the LCD display.)
 (Long)	<p>lr tr ls ts li lg tg hz EP com</p> 	Select the item to be changed (blink)
 	<p>lr tr ls ts li lg tg hz EP com</p> 	Change the item's value (blink)
 (Long)	<p>lr tr ls ts li lg tg hz EP com</p> 	Confirm the changes you made (shows 'OK')

## Change system settings

### Enable/disable remote configuration via network

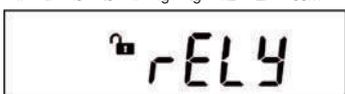

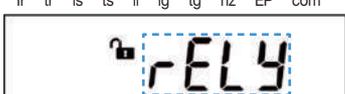

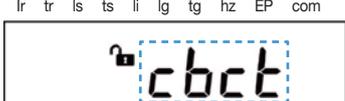

ex) Local → Remote

Steps	LCD display	Remarks
 (short)		Press mode in the relay setting mode to move to the system setting mode. Then, press Enter to move to the enable/disable remote configuration settings. (Check the status of the setting in the LCD display.)
 (Long)		Select the item to be changed (blink).
		Change the item's value (blink)
 (Long)		Confirm the changes you made (shows 'OK')

※ It is possible to change the settings remotely only when the 'Remote' mode is active.  
 LoCl: Local  
 rEnt: Remote

### Changing the DO output settings

ex) Display relay operation → CB Control

Steps	LCD display	Remarks
 (short)		Press Mode in the relay setting mode to move to the system setting mode. Then, press Enter to move to the DO output setting. (Check the status of the setting on the LCD display.)
 (Long)		Select the item to be changed (blink).
		Change the item's value (blink)
 (Long)		Confirm the changes you made (shows 'OK')

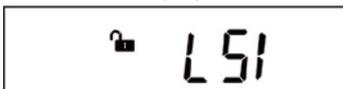

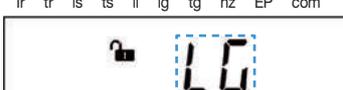

※ CB Control: It is possible to control the CB using a dedicated MOP.  
 (The dedicated MOP with a communication function will become available starting from 2022.)  
 rELY: Relay  
 cbct: CB Control

## Possible configuration of electrical auxiliaries

### Maximum possibilities

Phase	Accessory	TS100	TS160	TS250	TS400	TS630	TS800
R (Left)	AX	1	1	1	3	3	3
	AL	1	1	1	-	-	-
	AX	1	1	1	1	1	1
T (Right)	AX	1	1	1	-	-	-
	AL	-	-	-	1	1	2
	FAL	1	1	1	1	1	1

### Where to install accessories

Note 1) ETMi, ETHi, and ETLi types cannot use \*FAL or \*AX.  
 Note 2) SHT/UVT/TAL cannot be used simultaneously.

## Auxiliary switch and Alarm switch

### Auxiliary switch, AX

Auxiliary switch is for applications requiring remote “ON” and “OFF” indication. Each switch contains two contacts having a common connection. One is open and the other closed when the circuit breaker is open, and vice-versa.

AX

### Alarm switch, AL

Alarm switches offer provisions for immediate audio or visual indication of a tripped breaker due to overload, short circuit, shunt trip, or undervoltage release conditions.

They are particularly useful in automated plants where operators must be signaled about changes in the electrical distribution system. This switch features a closed contact when the circuit breaker is tripped automatically. In other words, this switch does not function when the breaker is operated manually. Its contact is open when the circuit breaker is reset.

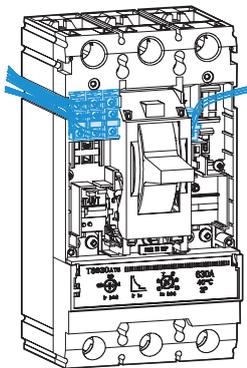

AL

### Fault alarm switch, FAL

FAL Indicates that the breaker has tripped due to overload or short circuit. And, it can be applied to only circuit breakers with electronic trip units.

### Contact operation

MCCB	ON	OFF	TRIP
Position of AX			
Position of AL, FAL			

### Technical data

Conventional thermal current I <sub>th</sub>	5A				
	Voltage (U <sub>e</sub> )	Current (I <sub>e</sub> )		Minimum load current	Applicable MCCB

DC	30V	4	3		
	125V	0.4	0.4		
	250V	0.2	0.2		

# Internal accessory

## Under-Voltage Trip (UVT)

UVT

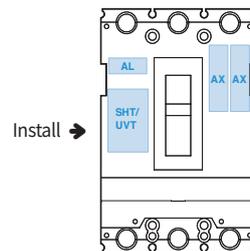

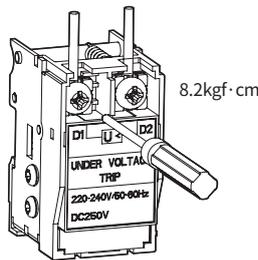

The undervoltage release automatically opens a circuit breaker when voltage drops to a value ranging between 35% to 70% of the line voltage. The operation is instantaneous, and after tripping, the circuit breaker cannot be re-closed again until the voltage returns to 85% of line voltage.

Continuously energized, the undervoltage release must be operating before the circuit breaker can be closed. The undervoltage release can be easily installed in the left accessory compartment of the Susol TS circuit breakers.

- Range of tripping voltage: 0.35 ~ 0.7Vn
- MCCB making is possible voltage: 0.85Vn (exceed)
- Frequency (only AC): 45Hz ~ 65Hz

### Rating

	Control voltage (V)	Consumption			Applicable MCCB
		AC (VA)	DC (W)	mA	
Power consumption	AC/DC 24V	0.64	0.65	27	TS100, TS160 TS250, TS400 TS630, TS800
	AC/DC 48V	1.09	1.10	23	
	AC/DC 110~130V	0.73	0.75	5.8	
	AC 200~240V/DC 250V	1.21	1.35	5.4	
	AC 380~440V	1.67	-	3.8	
	AC 440~480V	1.68	-	3.5	
Max. opening time (ms)		50			
Tightening torque of terminal screw		8.2 kgf·cm			
Transformer operating voltage (V)					
- Drop (Circuit breaker trips)		35~70% Vn			
- Rise (Circuit breaker can be switched on)		85% Vn			

This is installed on the left-hand side of the handle of the breaker. It cannot be used simultaneously with the SHT (voltage trip unit).

## Electrical auxiliaries (SHT)

SHT

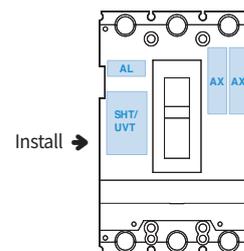

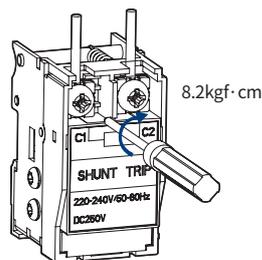

The shunt release opens the mechanism in response to an externally applied voltage signal. The releases include coil clearing contacts that automatically clear the signal circuit when the mechanism has tripped.

The shunt release can be installed in the left accessory compartment of the Susol TS circuit breakers.

- Range of operational voltage: 0.7 ~ 1.1Vn
- Frequency (only AC): 45Hz ~ 65Hz

### Rating

	Control voltage (V)	Consumption			Applicable MCCB
		AC (VA)	DC (W)	mA	
Power consumption	DC 12V	-	0.36	30	TS100, TS160 TS250, TS400 TS630, TS800
	AC/DC 24V	0.58	0.58	24	
	AC/DC 48V	1.22	1.23	25	
	AC/DC 110~130V	1.36	1.37	10.5	
	AC 220~240V/DC250V	1.80	1.88	7.5	
	AC 380~500V	1.15	-	2.3	
Max.opening time (ms)		50			
Tightening torque of terminal screw		8.2 kgf·cm			

This is installed on the left-hand side of the handle of the breaker. It cannot be used simultaneously with the UVT (undervoltage trip unit).

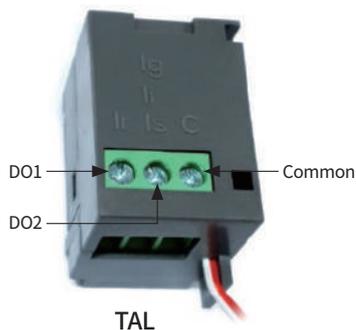

# Internal accessory

## Trip alarm relay, TAL

The TAL (trip alarm relay) is a device that is used to display the trip status signal of the Smart MCCB breaker.

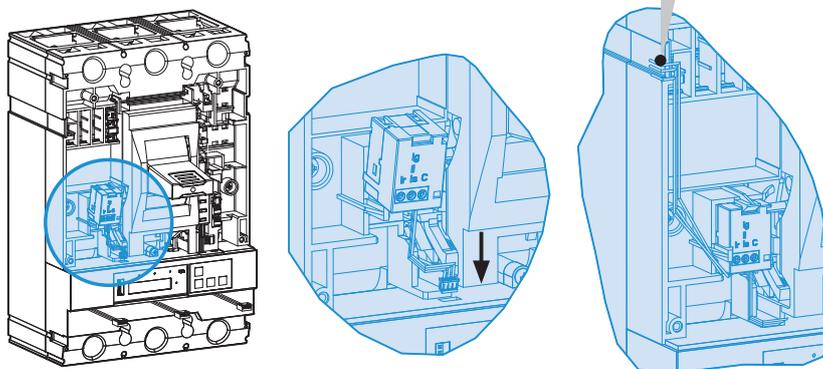

### Applicable breakers

- TS100Ni/Hi/Li ETMi/ETHi/ETLi
- TS250Ni/Hi/Li ETMi/ETHi/ETLi
- TS630Ni/Hi/Li ETMi/ETHi/ETLi
- TS160Ni/Hi/Li ETMi/ETHi/ETLi
- TS400Ni/Hi/Li ETMi/ETHi/ETLi
- TS800Ni/Hi/Li ETMi/ETHi/ETLi

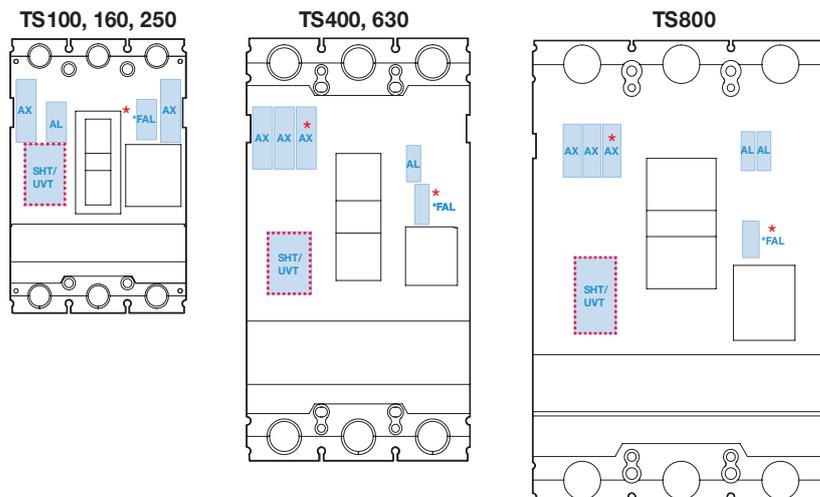

Assemble TAL on "SHT/UVT/TAL" marking. Attach the TAL in the area that is marked SHT/UVT/TAL.

TAL Lead Wire AWG 22 ~ 26

Assemble the connector according to indicated direction.

### Where to install accessories

Note 1) ETMi, ETHi, and ETLi types cannot use \*FAL or \*AX.  
 Note 2) SHT/UVT/TAL cannot be used simultaneously.

### Contact operation status

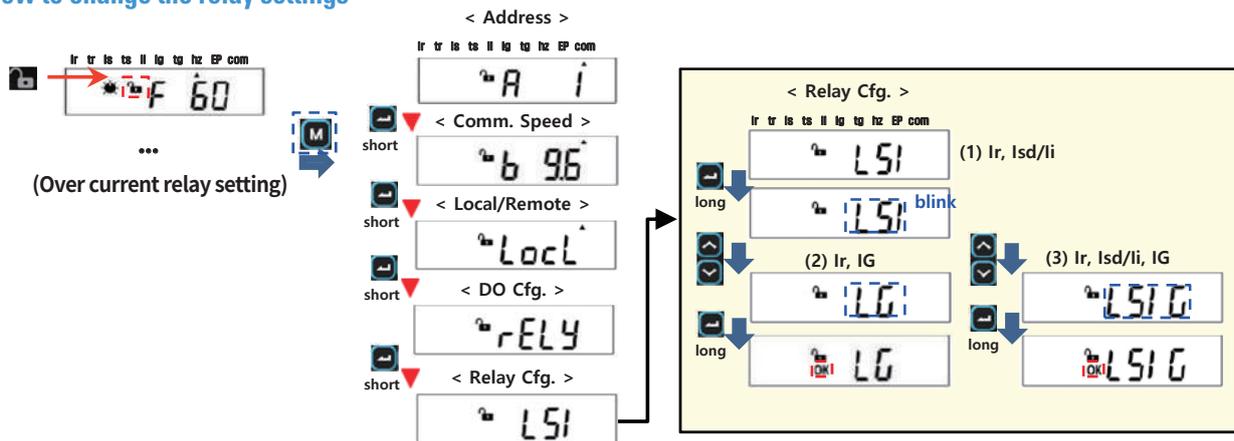

Relay Cfg.	Ir (Long time)	Isd/li (Short-time/ Instantaneous )	Ig (Ground fault)

## Neutral voltage tap, NVT

The NVT wiring type is used to measure the voltage and power in a Smart MCCB 3-pole Trip Unit (ETHi/ETLi.) An electronic trip unit is connected to the NVT through a VT terminal.

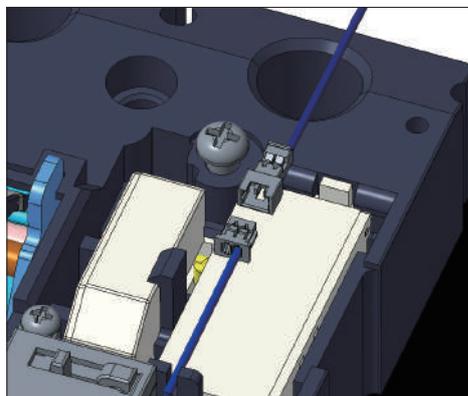

### Applicable trip units

- TS100Ni/Hi/Li 3P ETHi/ETLi
- TS160Ni/Hi/Li 3P ETHi/ETLi
- TS250Ni/Hi/Li 3P ETHi/ETLi
- TS400Ni/Hi/Li 3P ETHi/ETLi
- TS630Ni/Hi/Li 3P ETHi/ETLi
- TS800Ni/Hi/Li 3P ETHi/ETLi

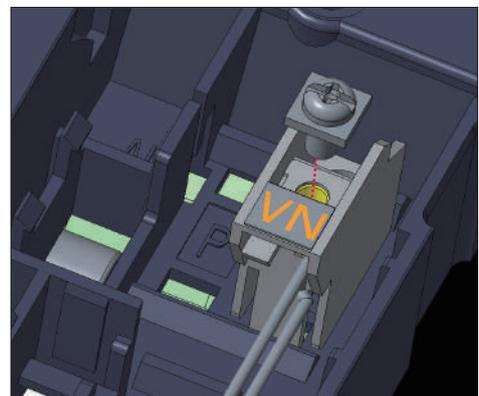

### NVT wiring type

### Where to install accessories

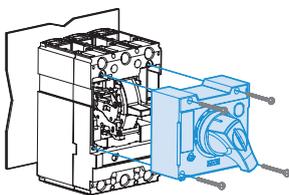

TS100, TS160, TS250

TS400, TS6300, TS800

## Rotary handle

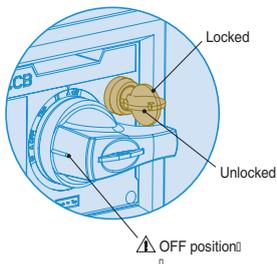

The rotary handle operating mechanism is available in either the direct version or in the extended version on the compartment door. It is always fitted with a compartment door lock and on a request it can be supplied with a key lock in the open position.

Direct rotary handles

### Direct rotary handles

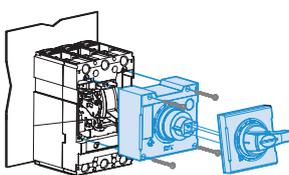

MCCB	Rotary handle
TS100, 160, 250	DH2
TS400, 630	DH3
TS800	DH4

Direct rotary handle with a key lock

### Direct rotary handle with a key lock

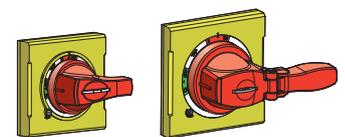

MCCB	Padlockable device	Lock function
TS100, 160, 250	DHK2	Lock in On or Off position
TS400, 630	DHK3	
TS800	DHK3	

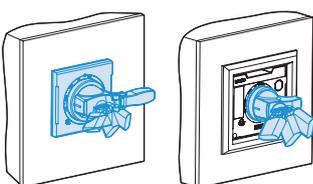

Extended rotary handles

### Extended rotary handles

MCCB	Padlockable device
TS100, 160, 250	EH2
TS400, 630	EH3
TS800	EH4

Red/Yellow color handle available

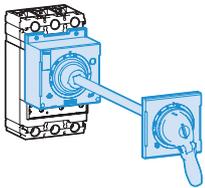

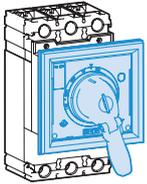

Padlocks for direct or extended handle

Padlocks can be used to lock the breaker in the ON or OFF position.

# External accessory

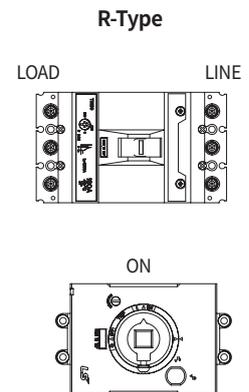

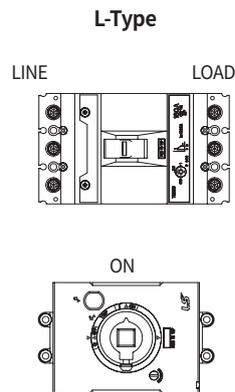

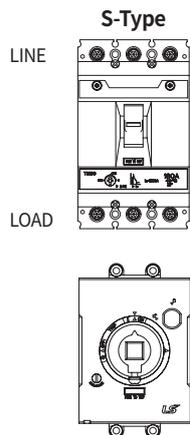

## Rotary handle

### Degree of protections

Type	Degree of protection	IP
Circuit breaker with cover frame and rotary direct handle	The access probe of 1.0mm diameter shall not penetrate.	IP40
Circuit breaker with cover frame and rotary extended handle	Totally protected against ingress of dust and water jets from any direction	IP65

### Type suffix according to the mounting position

## Locking device

### Removable locking device

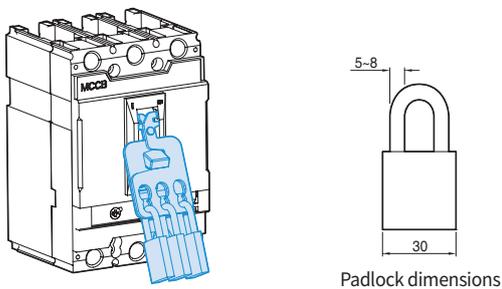

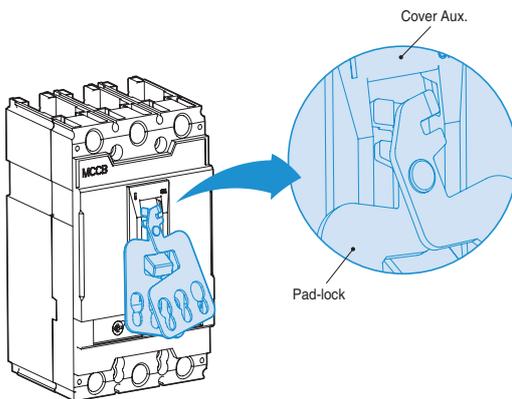

Removable locking device is available for all TS circuit-breakers. The locking device is designed to be easily attached to the circuit-breaker.

This device allows the handle to be locked in the “OFF” position. Locking in the OFF position guarantee isolation according to IEC 60947-2.

The locking device for the toggle handle can be installed in 3-pole and 4-pole circuit-breakers. Maximum three (3) padlocks with shackle diameters ranging from 5 to 8mm may be used. (Padlocks are not supplied)

MCCB	Padlockable device	Function
TS100, 160, 250	PL2	“OFF” position
TS400, 630	PL3	
TS800	PL4	

# External accessory

## Locking device

### Fixed locking device

Fixed locking device is available for all TS circuit-breakers. This device allows the handle to be locked in the "ON" and "OFF" position. Locking in the OFF position guarantee isolation according to IEC 60947-2.

The locking device for the toggle handle can be installed in 3-pole and 4-pole circuit-breakers. Maximum three (3) padlocks with shackle diameters ranging from 5 to 8mm may be used. (Padlocks are not supplied)

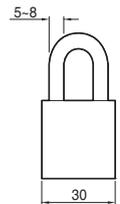

MCCB	Padlockable device	Function
TS100, 160, 250	PHL2	Lock in Off or On position
TS400, 630	PHL3	
TS800	PHL4	

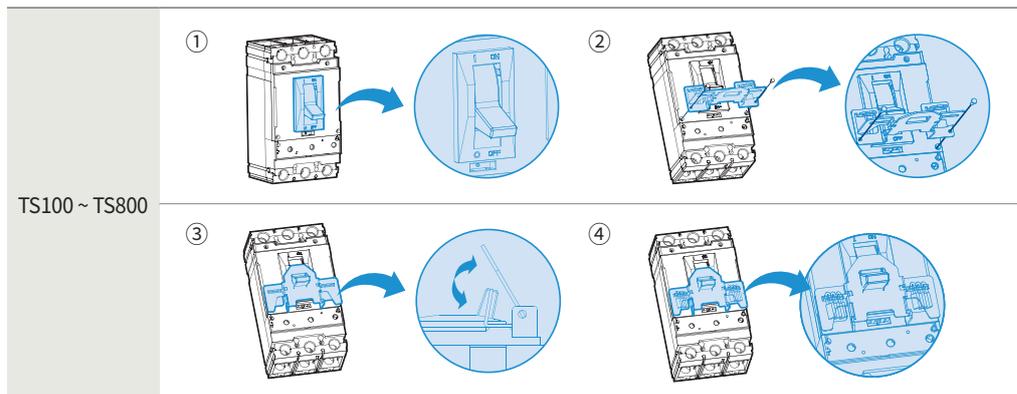

### How to use

The locking device for the toggle handle is designed to be easily attached to the front of circuit-breaker.

- ① Please set the toggle handle in the position of "On" or "Off".
- ② Install the lock device onto the front of auxiliary cover of circuit breaker.
- ③ Folding the wings of lock device as shown in picture ③.
- ④ The padlock to be used shall be that which is commercially available with the nominal dimension. (30mm nominal dimension, 5-8mm diameter)

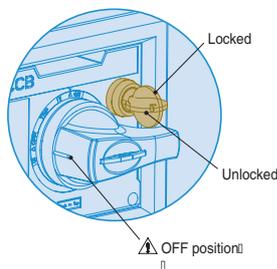

Padlock dimensions

**Locking by rotary handle with a key lock**

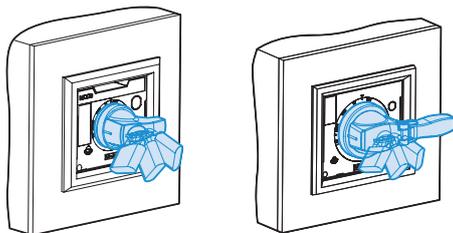

A locking can be done by using the rotary handle which has key lock device. The lock is used to lock the circuit-breaker in the OFF position.

MCCB	Padlockable device	Function
TS100, 160, 250	DHK2	Lock in Off position
TS400, 630	DHK3	
TS800	DHK4	

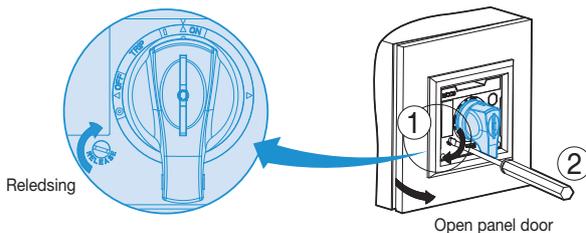

**Padlocking by rotary handle**

A padlocking can be also done by using the rotary handle. The lock is used to lock the circuit-breaker in the ON and OFF position. Maximum three (3) padlocks with shackle diameters ranging from 5 to 8mm may be used. (Padlocks are not supplied)

**Releasing panel door lock at ON position**

The panel door can be locked at ON and TRIP position of rotary handle. To open the panel door at ON position, just rotate release screw clockwise.

# External accessory

## Terminals

### Terminal mounter

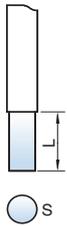

It is supplied with Susol MCCBs as a standard part of circuit-breaker.  
Connecting part with terminal for bus bar, cable with lug.

MCCB	Type
TS100, 160, 250	TM2
TS400, 630	-
TS800	-

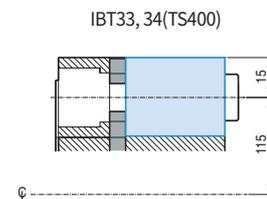

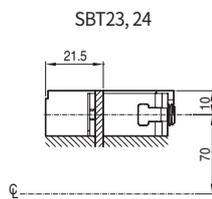

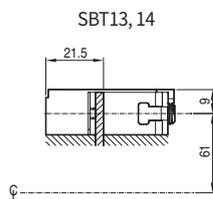

### Inner lug terminal

Bare cable connectors for Susol TS series circuit-breakers.  
Can be used for both aluminum and copper cables.

MCCB	Type	Pole	Set quantity	Cable connection possibilities	Conductor size	
TS100, 160, 250	SBT23	3	1 Set (3EA)	1	L(mm)	21
	SBT24	4	1 Set (4EA)		S(mm <sup>2</sup> )Cu/Al	10~150

TS800	-	-	-

Round type

## Terminal cover

The terminal covers are applied to the circuit-breaker to prevent accidental contact with live parts and thereby guarantee protection against direct contacts.

### Long type covers, ITL

IP40 degree of protection

For fixed circuit-breakers with front, front extended, front for cables terminals.

### Short type covers, ITS

IP40 degree of protection

For fixed circuit-breakers with rear terminals and for moving parts of plug-in

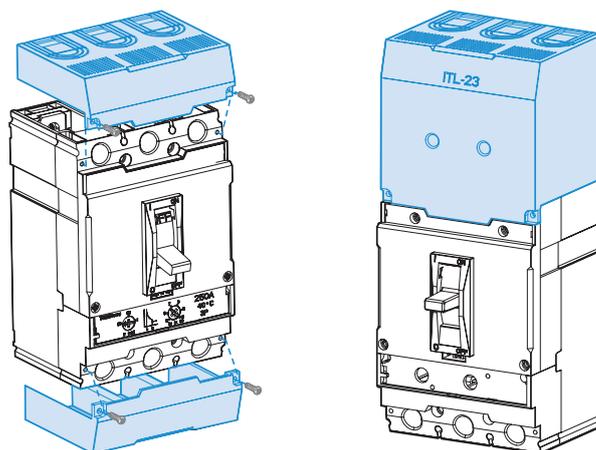

Short type covers

Long type covers

MCCB		Terminal cover	
Frame type	Pole	Long type	Short type
TS100, 160, 250	2P, 3-pole	ITL23	ITS23
	4-pole	ITL24	ITS24
TS400, 630	2P, 3-pole	ITL33	ITS33
	4-pole	ITL34	ITS34
TS800	2P, 3-pole	ITL43	ITS43
	4-pole	ITL44	ITS44

Note1) 2P in 3pole mold case

# External accessory

## Insulation barrier

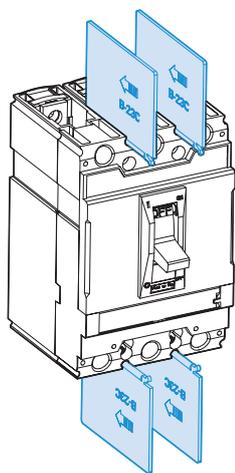

Insulation barriers

These allow the insulation characteristics between the phases at the connections to be increased. They are mounted from the front, even with the circuit-breaker already installed, inserting them into the corresponding slots.

They are incompatible with both the insulating terminal covers.

It is possible to mount the phase separating partitions between two circuit-breakers side by side.

Applied MCCB	Set quantity
TS100, 160, 250	B-23C
TS400, 630	B-33C
TS800	B-43C

## Mechanical interlock

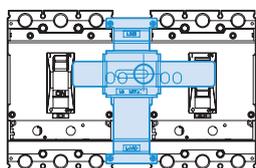

Mechanical Interlock  
(Padlocks are not supplied)

The mechanical interlock (MIT) can be applied on the front of two breakers mounted side by side, in either the 3-pole or 4-pole version and prevents simultaneous closing of the two breakers. Fixing is carried out directly on the cover of the breakers.

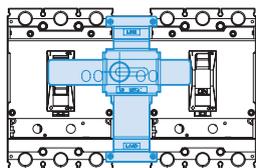

The front interlocking plate allows installation of a padlock in order to fix the position. (possibility of locking in the O-O position as well)

This mechanical interlocking device is very useful and simple for consisting of manual sourcechangeover system.

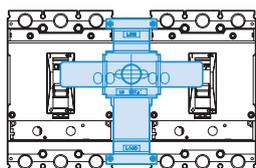

### Operation

Left MCCB: ON/OFF is possible  
Right MCCB: Off lock

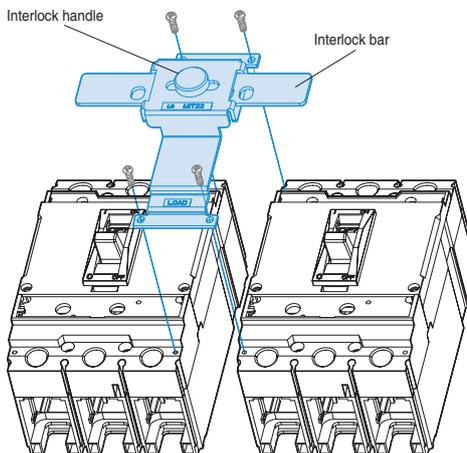

Left MCCB: Off lock  
Right MCCB: ON/OFF is possible

Both MCCBs are of locked

MCCB		Interlock
Frame type	Pole

	4-pole	MIT24
TS400, 630	3-pole	MIT33
	4-pole	MIT34
TS800	3-pole	MIT43
	4-pole	MIT44

# External accessory

## Plug-in system

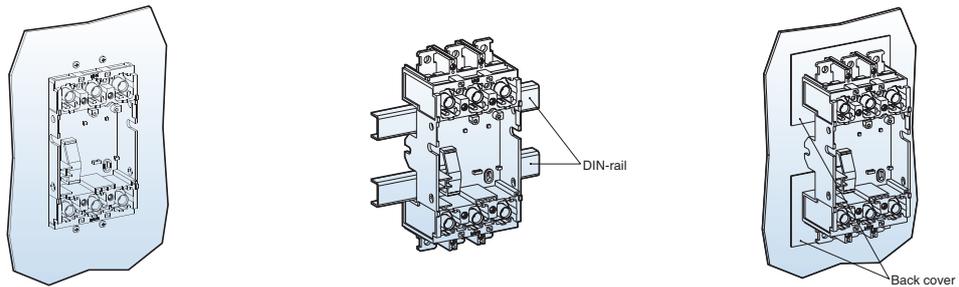

The plug-in base is the fixed part of the plug-in version of the circuit-breaker. It will be installed directly on the back plate of panel. The circuit-breaker is racked out by unscrewing the top and bottom fixing screws.

Plug-in base makes it possible to extract and/or rapidly replace the circuit breaker without having to touch connections for ship and important installations.

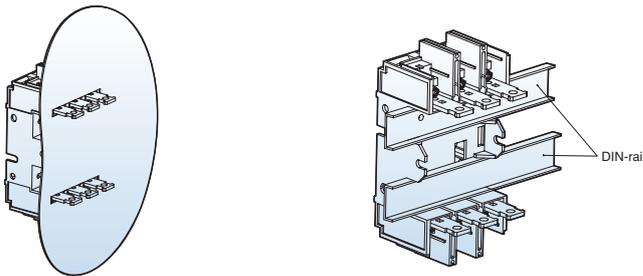

MCCB	Pole	Arrangement	Type	Means
TS100, 160, 250	2	Single line	PB22

## Motor operator

Motor operators can also be operated by manual. The motor drives a mechanism which switches TS toggle handle to the “ON” and “OFF/RESET” positions.

- The manual actuator handle is located on the front of the cover.
- Manual or Automatic operation can be selected.
- Applicable to 2, 3 and 4-pole breakers.

The motor operator is an essential device for constructing a remote operated automatic source-changeover system to ensure a continuous supply of electrical power at following certain installations:

- Commercial sector: Hospital, Tall building, Bank, Insurance companies, Shopping centers
- Industry: Ships, Assembly lines at plant, Military sites, Port and Railway installation

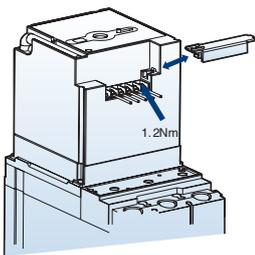

### Model and rating

TS250 + MOP2

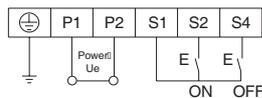

Smart MCCB	Type	Control voltage	Actuation current (A)	Response time (ms)		Consumption (W)	Mechanical service life (operations)	No. of operations per hour
				Closing	Opening			
TS100, 160, 250	MOP2	① DC 24V ② AC 100~110V/ DC 110V ③ AC 230V/DC 220V	$\leq 5A$ (DC 24V) $\leq 2A$ (AC)	350	230	14	25,000	120
TS400, 630	MOP3			500	350	35	20,000	60
TS800	MOP4			700	420	35	10,000	20

### Wiring connection

#### Standard connection

Circuit breaker On and Off controlled by remote operation and manual operation

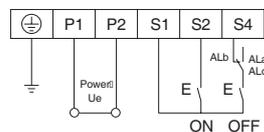

#### Connection with alarm switch (AL)

- 1) The below connection diagram is the method of using an alarm switch (AL) without shunt or undervoltage trip.
- 2) After clearing the fault surely, manual reset is mandatory in case of tripping due to an electrical fault.

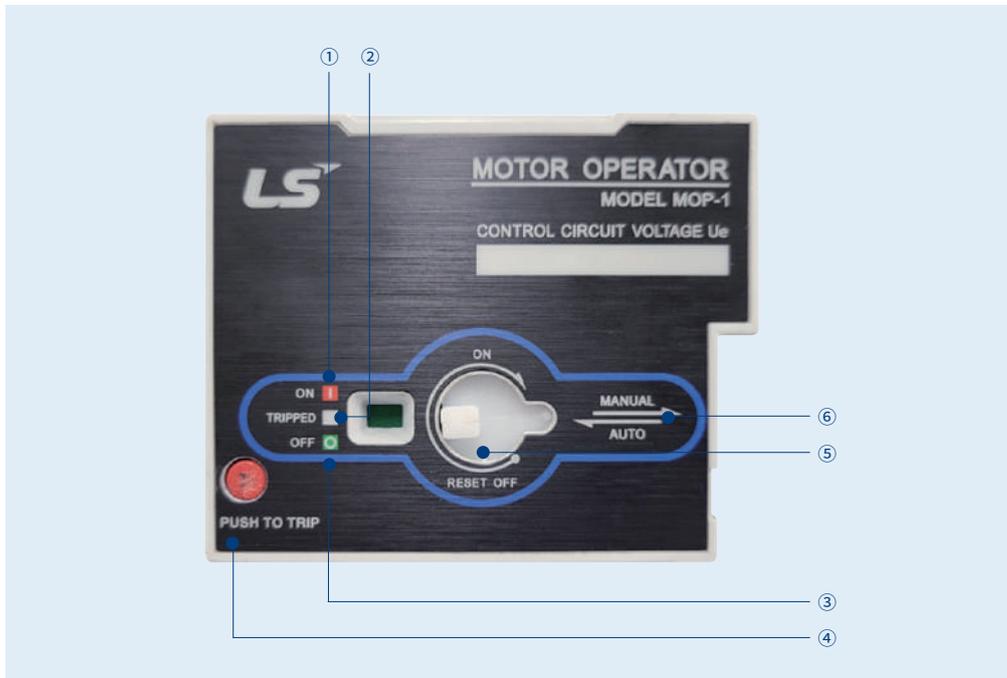

#### Connection with FAL (only for the breakers with electronic trip unit ETS or ETM)

- 1) The below connection diagram is the method of using a FAL for circuit breakers with electronic trip unit.
- 2) After clearing the fault surely, manual reset is mandatory in case of tripping due to an electrical fault.

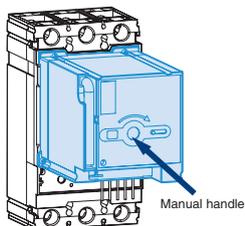

Exterior description

1. On position indication (Red color)
2. Trip position indication (White color)
3. Off position indication (Green color)
4. Button for push to trip (available for only for and TS630AF)
5. On/Off/Reset selection lever
6. Manual/Auto selection lever

Manual operation

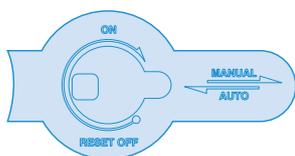

- 1) Insert the manual handle into the slot of Motor Operator surface and rotate it clockwise.
- 2) It must be rotated just 180° clockwise for safe operation of micro switch in the motor operator.
- 3) Return the manual handle after the manual operation
- 4) Turn the slide switch back to the position of AUTO.

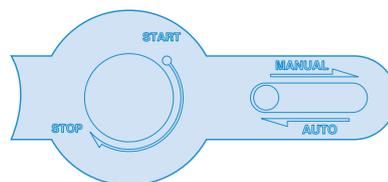

**CAUTION:** When the circuit breaker is tripped by trip button in the OFF status, it is impossible to operate motor operator automatically. It must be reset by manual operation.

Automatic operation

- 1) Set the slide switch to AUTO, then internal power is closed automatically.
- 2) ating frequency should be less than these below regulated values.  
TS250Ni/Hi/Li:180 operations per hour
- 3) Use the ON/OFF switch in the range of regulated values.
- 4) It may interfere near communication equipments because of internal switching power supply.  
It's recommended that a noise filter be installed to power supply.
- 5) Please do not input ON/OFF signals at the same time during the automatic operation.
- 6) If the circuit breaker has a UVT attached inside, charge a UVT on the rated voltage before performing MOTOR OPERATOR.

## Residual Current Devices (RCD)

### Summary

The Smart Susol circuit breaker can offer protection against earth leakage currents by using an add-on residual current device (RCD). In particular, the TS100, TS160 and TS250 circuit breakers can be combined with the RTU23/24 of residual current device, the TS400 and TS600 circuit breakers can be combined with the RTU33/34 of residual current device and the TS800 circuit breaker can be combined with the RTU43 of residual current device. In all cases the RCD unit interfaces directly below the circuit breaker trip unit area without the use of any secondary wiring or connections.

The Smart Susol circuit breaker and an RCD unit combination can be connected like any stand-alone breaker and are available as fixed or plug-in devices. The main connection interface of the RCD is an exact replacement of the breaker connection area, thus allowing the use of all standard breaker terminals.

### Overview

Apart from the protection against overloads typical of automatic circuit breakers, the residual current circuit breaker derived from them also guarantee protection of people against earth leakage currents, thereby ensuring protection against direct contacts, indirect contacts and fire hazards.-(ELCB)

The RCD unit has numerous current and time settings and an override blocking the time settings when set to 30mA. The earth leakage test button tests the electrical and mechanical operation of the device. In order to allow for a dielectric test of the breaker and RCD combination without damaging the electronics, the dielectric plug is placed within the setting area. The RCD unit may be equipped with an alarm switch (FAL) to remotely indicate tripping due to an earth leakage current.

### Compliance with standards

- IEC 60947-2 (industrial), Appendix B
- IEC 61009 (residential)
- IEC 60755, class A, immunity to DC components up to 6mA
- VDE664, operation down to -25°C

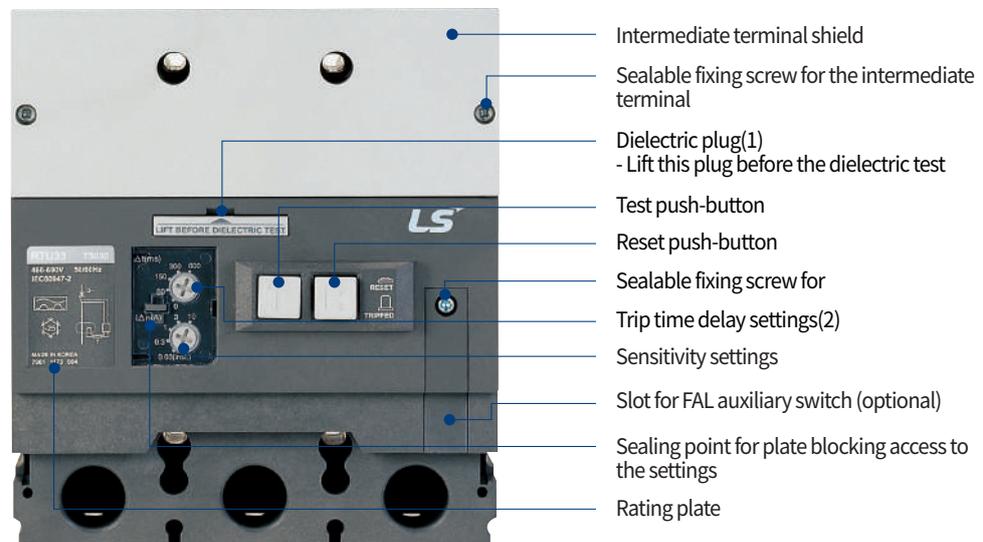

### Remote indications

RCD unit may be equipped with an alarm contact (FAL-fault alarm switch) to remotely indicate tripping due to an earth leakage current.

### Power supply

RCD unit are self-supplied internally by the distribution-system voltage and therefore do not require any external source. They continue to function even when supplied by only two phases.

### Configuration

- If the sensitivity is set to 30 mA, there is no time delay. Whatever the time-delay setting.

## Ratings and Selection

RCD type		RTU23	RTU24	RTU33	RTU34	RTU43

## Panel HMI (3.5inch)

### Specification

Model name	Rated voltage	Power consumption	Temperature range	
IHM8	DC24V(±20%)	3.0W or less	Operate	-20 ~ +60(°C)
			Store	-30 ~ +80(°C)

- Color TFT LCD (3.5" or more) + LED backlight
- User operation : cancel, move (up), move (down), confirm, set
- Displays communication status LED
- Supports two languages (English and chinese)
- Supports upgrade function through USB port (PC manager connection)
- Sub-device connection through RS-485 communication
  - : Connects up to 8 sub-devices
  - : 9,600, 19,200, 38,400, 57,600bps support
- Fail safe and termination selection switch applied

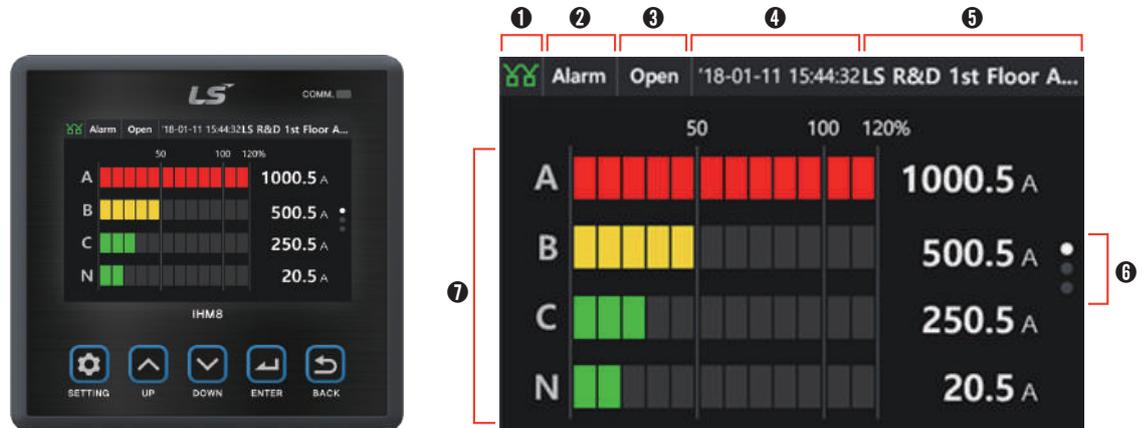

### Display screen

- **Basic information of circuit breaker**
  - Number of poles, rated voltage, rated current, communication address, communication speed, control method
  - Manufacturer, model name, H/W version, S/W version, communication version, serial number
- **Current/Time of circuit breaker relay**
  - Long time delay, short-time delay, instantaneous, ground fault
- **Measurement data of circuit breaker**
  - Voltage, current, active/reactive/apparent power for each phase
  - Energy : EP, EQ, rEP, rEQ, ES display
  - PQ (Power Quality) : Freq, PF, THD, TDD
  - Max Demand : Current value for each phase, active/reactive/apparent power
- **Breaker operation history**
  - Operating time, circuit breaker close time
  - Number of electrical operations, number of mechanical+electrical operations, number of trip operations
  - Contact consumption rate (0~100%)
- **Circuit breaker DI/DO status information and control**
- **History of events that occurred in the circuit breaker (save 20)**
- **Fault history of circuit breaker (save 20)**

### Target device

Type	Model name
Smart MCCB	Susol Smart MCCB
Smart ACB	Susol ACB STU, Metasol ACB STU
MCB	MCB Connected with M LINK

## Screen description

### ❶ Communication connection status display

- "Communication connected" or "Communication not connected" is indicated by the RS485 communication icon.

### ❷ Alarm display

- If there is no alarm, it is shaded. When a new alarm is generated, 'Alarm' is displayed.

### ❸ Contact status display

- Displays the breaker's contact status ('Close', 'Open', 'Trip').

### ❹ Time display

- Displays the time (year-month-day hour : minute : second) of the connected device.

### ❺ Name display

- Displays the name of the connected device.

### ❻ Page display

- Displays the number of connected devices and brightly displays the order of the currently displayed screen.

### ❼ Load current display

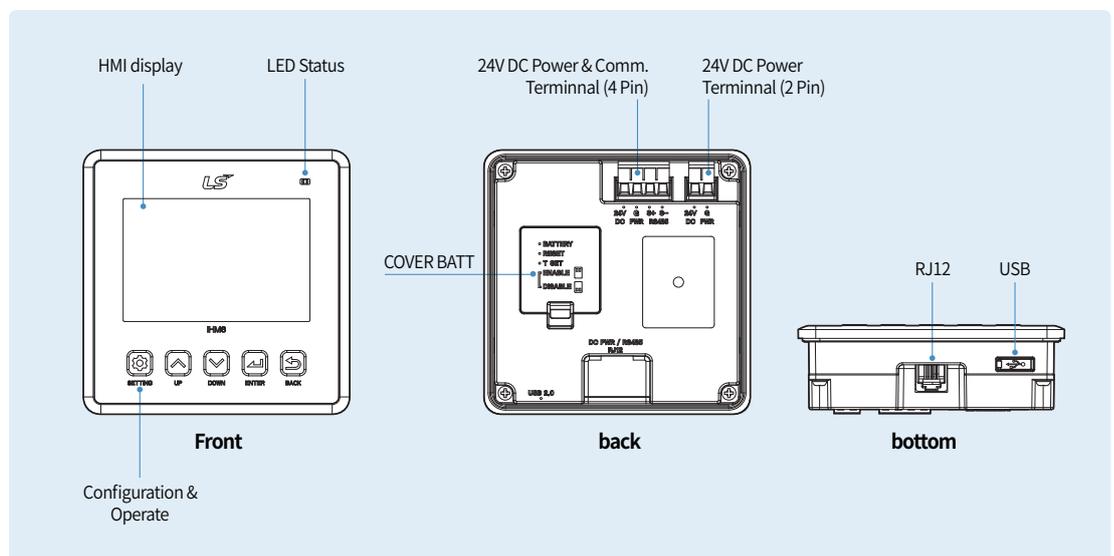

- It is displayed as 'A/B/C' or 'A/B/C/N' depending on the load connection.

- The size and color of the graph change depending on the load factor.

- Displays the load current value.

\* The screen configuration of ACB and M LINK is different from that of MCCB, so please refer to the user manual.

## Panel HMI (7.0inch)

### Specification

Model name	Rated voltage	Power consumption	Temperature range	
IHM32	DC24V(±20%)	23.0W or less	Operation	0 ~ +50 °C
			Storage	-20 ~ +60 °C

- Color TFT LCD (7.0" or more) + LED backlight
- User operation: Touch pad
- Indication of device communication status
- Supports two languages (English and chinese)
- Support upgrade function through USB port
- Sub-device connection through ethernet communication
  - : Up to 32 sub-devices (up to 40 devices can be connected for E TAG)
  - : Up to 16 sub-devices can be selected and displayed (screen output)

### Display screen

#### • Dashboard

- Full information display: Displays communication status with gateway, panel name, and system date/time
- Quick View: Displays representative information of the device selected for monitoring in the form of icons
- Alarm: Displays the alarm information of the device selected for monitoring in the form of a list
- Event: Displays the event information of the device selected for monitoring in the form of a list
- Setting: Gateway IP for communication linkage, device selection for monitoring, user password, etc.

#### • Device Details

- Monitoring: Displays device status, communication status, measurement data, operation time, DI/DO status
- Control: Performs device On/Off control
- Management: Display and reset history and count data information
- Event: Displays incident event, device operation and abnormal event
- View setting: Displays device setting value and relay element setting value
- Device information display: Displays device-specific information such as device ID and device name

### Target device

Type	Model name
Communication device	Data Logger, Gateway, Ethernet Converter, E COLLECTOR
Accessory device	M LINK, TRIO, Thermal CAM
Circuit breaker	Susol ACB STU, Metasol ACB STU, Susol Smart MCCB
Measurement device	GIMAC1000, GIMAC-B, E TAG, MMP, DMPi, Energy Meter

### Screen description

#### Quick View, View All

Display form	Description
ACB STU	Displays device communication status, device name, and device status
TRIO	Displays device communication status, device name, and analog input point (AI #1) value
MCCB	Displays device communication status, device name, and device status
M Link	Displays device communication status, device name, DI/DO status
SEMPR	Displays device communication status, device name, and device status
DMPi	Displays device communication status, device name, and measurement value

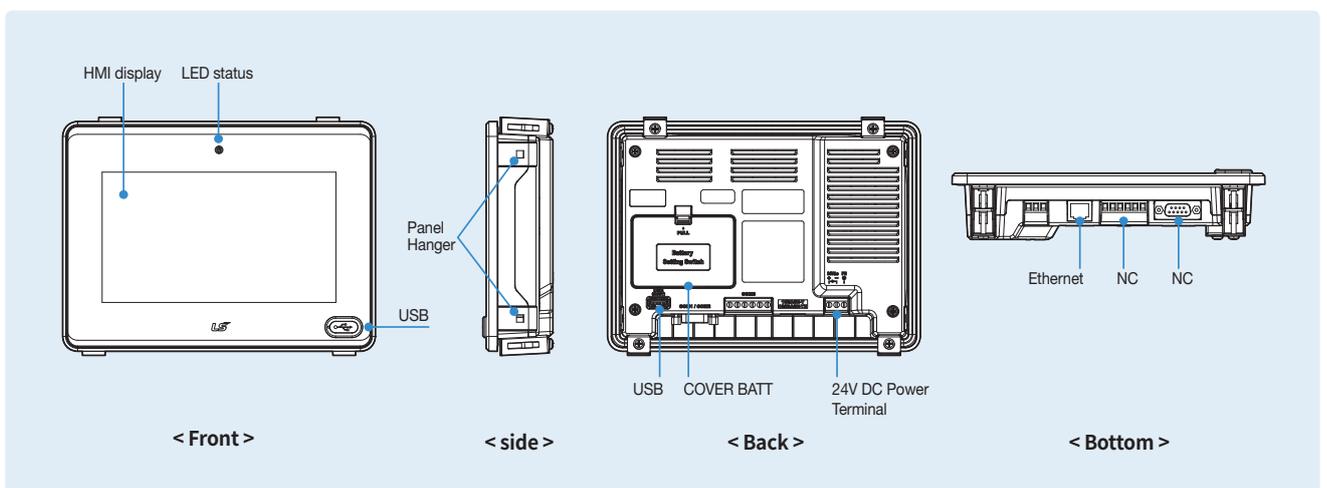

#### Quick View, View divided

Display form	Description
ACB STU	Displays device communication status, device name, device status, value of Vab, Tot P
TRIO	Displays device communication status, device name, and analog input point (AI #1) value
MCCB	Displays device communication status, device name, device status, and values of Ia, Ib, and Ic
M Link	Displays device communication status, device name, DI, DO, Mode status, control mode value
SEMPR	Displays device communication status, device name, device status, and values of Ia, Ib, and Ic
DMPi	Displays device communication status, device name, and values of Ia, Ib, and Ic

#### Detailed screen of device

Display form	Description
Monitoring	Displays selected device monitoring data (Device status, communication status, measurement data, operation time, DI/DO status)
Control	Control command (device On/Off)
Management	Display and reset history and count data
Event	Event and alarm list display
Settings	Displays set value information, relay element set value
Device information	Displays device-specific information such as device ID and device name
Group	The category name of the individual information item
Label	Name of individual information item

# External accessory

## T Connection Module

### Specification

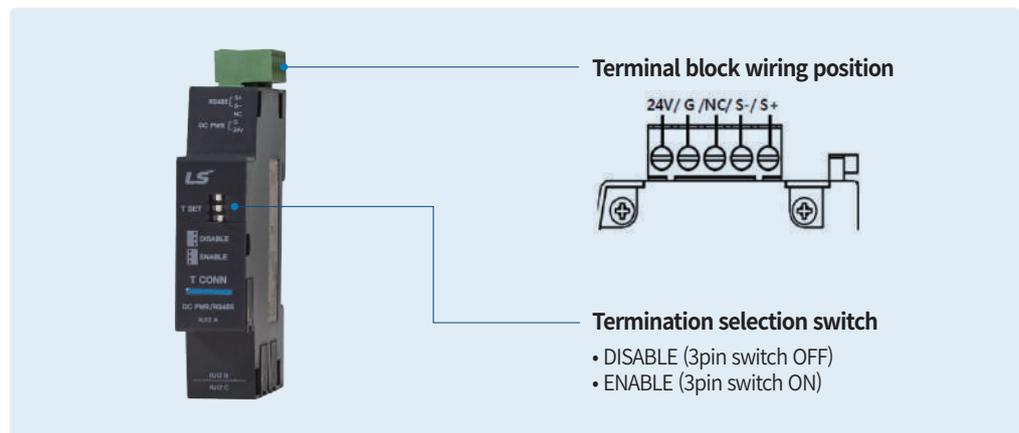

T Connection Module is a branch module that can provide convenience when connecting multiple RS485 communication devices through multi-drop communication. It also provides termination processing when the device is located at the end.

Type	Details
Model name	ITCM
Rated voltage	DC24V(±10%)
Basic function	Multi-drop connection
	Termination Selection
Mounting method	DIN-Rail, Screw (Screw not supplied)
Size	17.8(W) × 81(H) × 65.6(D), unit : mm

### Applicable breaker

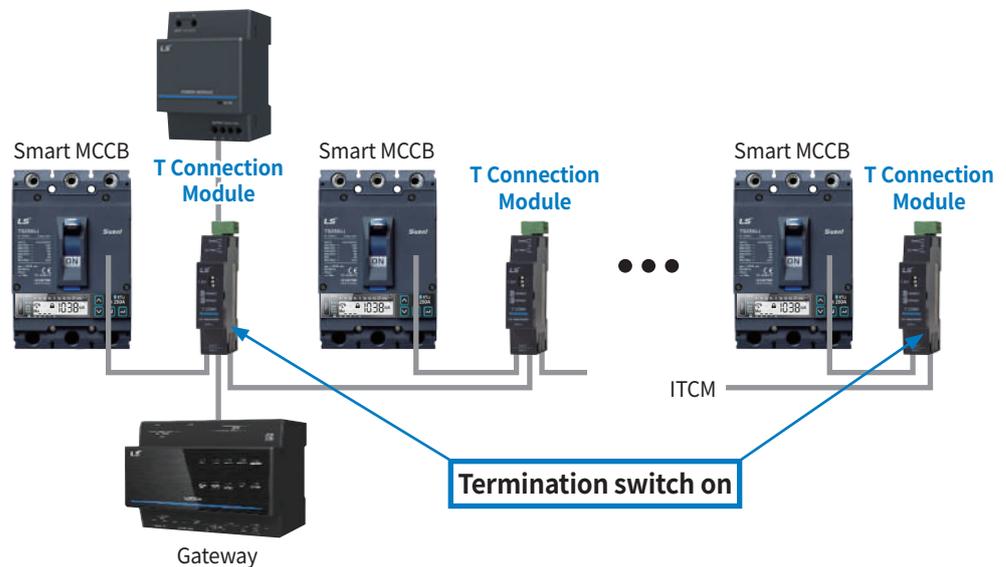

- Susol Smart MCCB
- ACB STU
- MCB connected by M-link

### Exterior description

### Device usage example

When you wish to connect n number of devices excluding the upper system, you can conveniently configure them using n number of ITCM. Stable RS485 multi-drop is possible by deadening.

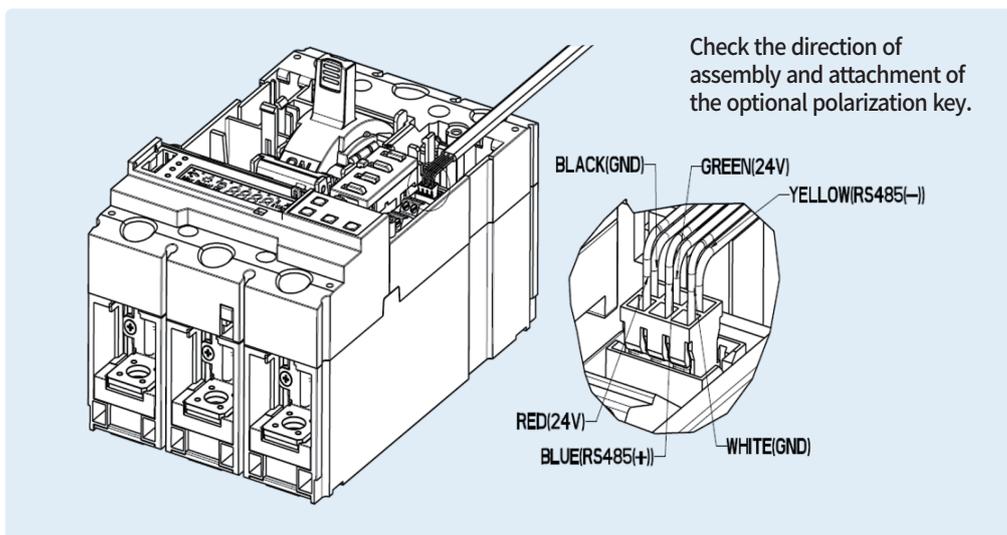

## Communication/power connection cable

### Specification

This is a communication/power connection cable used to connect Smart MCCB, T connection module and panel display (3.5 inch), etc.

There are three types: 0.35m, 1.3m, and 3m in length.

Type	0.35m	1.3m	5m
Model name	EXIO L350	EXIO L1300	EXIO L3000
Basic function	Communication / power connection		

### Exterior description

# External accessory

## M LINK

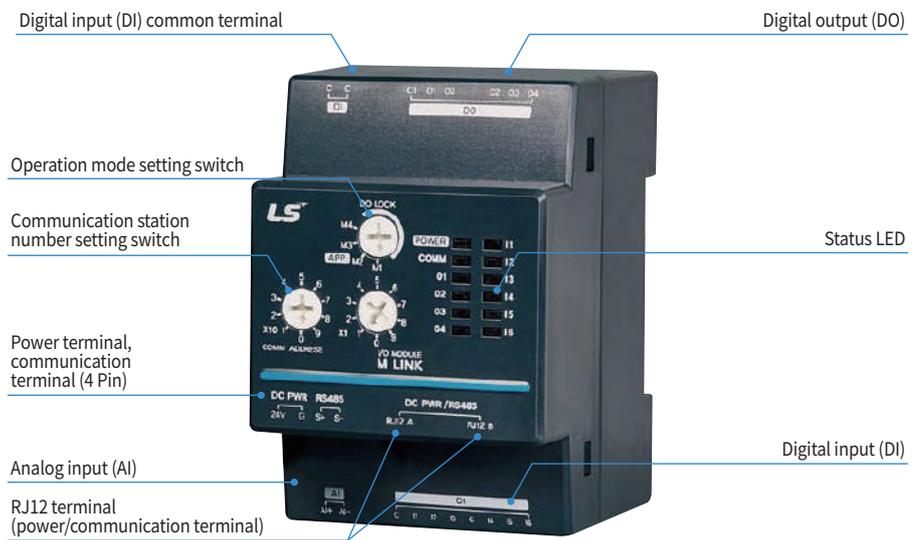

It is a digital input/output and communication module for monitoring the status of on-site contacts, remote control of on-site contacts, and measuring on-site analog values on the low-voltage panel monitoring and control system.

### Features

Type		Details	
Model name		INM-DC24V-DI6/DO4	
Rated voltage		DC24V	
Power consumption		1.3W or less	
Function		Monitoring function: DI contact monitoring Control function: DO contact control Analog input value measurement: AI contact input value measurement Communication function: RS485 (Modbus)	
Input/output contacts	DI	Number of contacts	6 (6 DI, COM.4) Note] COM contacts are the same in electrical circuit
		Connection method	Hardwired, pluggable
		Contact method	Dry contact
	DO	Number of contacts	4 (4 DO, 2 Com.)
		Connection method	Hardwired, pluggable
		Rated voltage/current	250Vac/3A, 30Vdc/3A
		Contact method	Non-Latch, A contact (Normal Open)
	AI	Number of contacts	1개 (AI+, AI-)
		Connection method	Hardwired, pluggable
Input range		DC 4-20mA	
Protocol		Modbus RTU	
Communication method		RS485	
Size		4(W)×81(H)×65(D), unit: mm	
Use temperature		-25 ~ +60 °C	
Storage temperature		-40 ~ +80 °C	
Ambient humidity		Within 85% RH, no condensation	

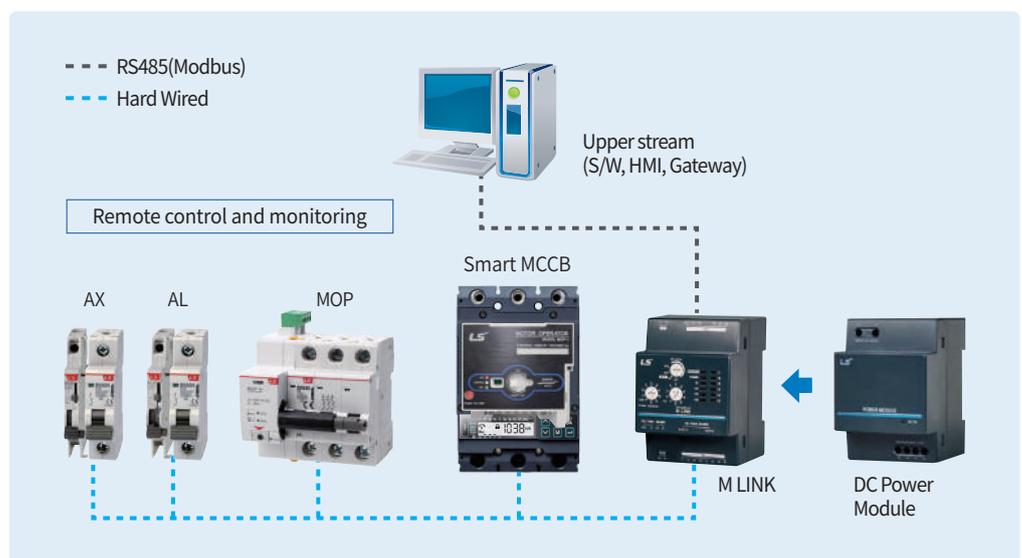

Exterior description

Device usage example

It can be used a digital input/output (DI/DO) communication module for on/off/trip status monitoring and on/off control of the Circuit breaker (MCB/MCCB). It also provides DI/DO operation function according to the operation mode (M1~M4, DO LOCK) for user convenience.

Operation mode	Function and usage
M1	General DI/DO operation
M2	Remote circuit breaker control
M3	Remote/on-site circuit breaker control
M4	On-site load control (DI/DO linkage control)
DO Lock	General DI operation (DO cannot be controlled)

# External accessory

## DC Power Module

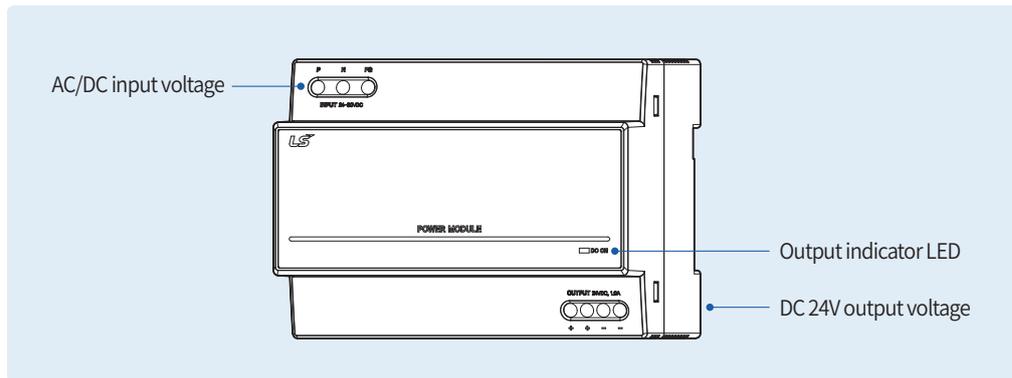

The DC Power Module is a power supply device that supplies DC24V. It is composed of 4 types according to the rated voltage of the input.

### Specification

Type	Specification			
Model name	IPM6P-DC30V /DC24V24W	IPM6P-DC125V /DC24V24W	IPM6P-AC415V /DC24V24W	IPM6P-AC240V /DC24V60W
Rated voltage	24-30VDC	48-125VDC	380-415VAC	100-240VAC
Input range	20-33VDC	40-138VDC	323-457VAC	85-264VAC
Frequency	-		50/60Hz(45-65Hz)	
Output voltage	24VDC(±5%)			
Output current	1A		2.5A	
Use temperature	-25~+60°C			
Storage temperature	-40~+85°C			
Mounting method	Din-rail, Screw(Screw not supplied)			

### Exterior description

### Device combination

It can be used for the device that uses DC 24V as an input power supply and can be combined with Smart LV panel components. It can be combined with 24 ~ 60W DC power module.

ACB STU Atype - 3W, P/Stype - 5W	Smart MCCB - 1W	M-Link - 1.3W	Panel HMI(3.5 inch) - 3W
TRIO - 5W	Ethernet / Converter - 1W	Gateway - 11W	E-Collector - 5W
Panel HMI(7.0 inch) - 23W	Thermal imaging camera- 2W		

**Device usage example**

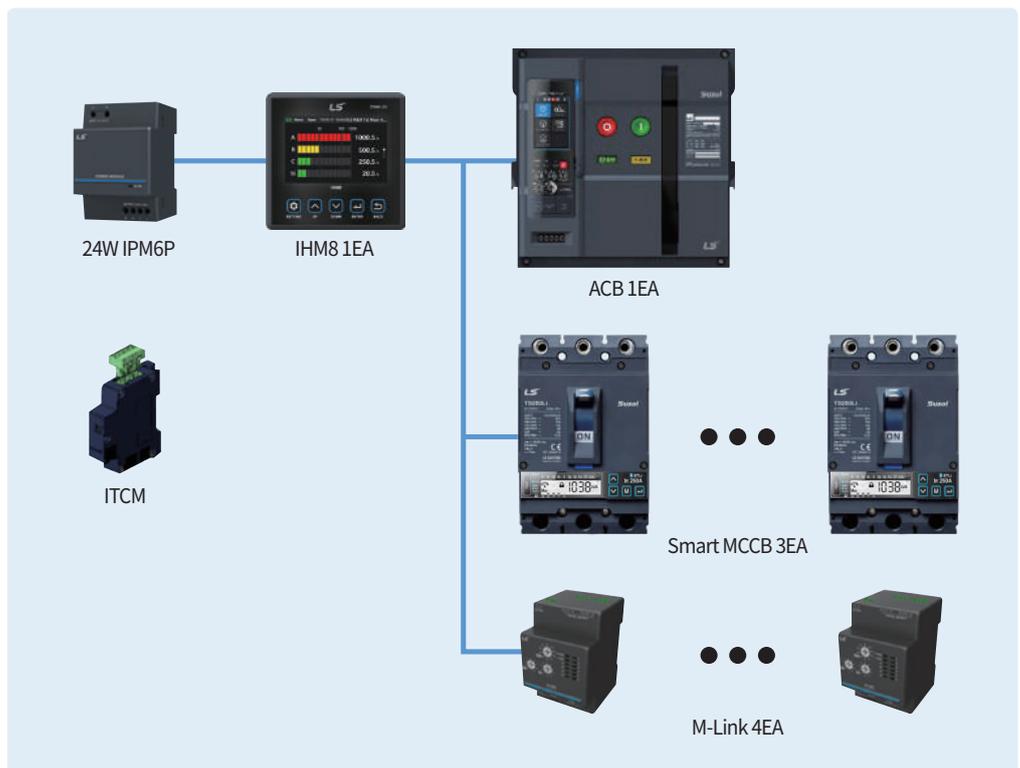

**1) Composition of Smart MCCB + M LINK panel**

- If Smart MCCB 6EA, M LINK 8EA and panel HMI (3.5 inch) 2EA are connected to 24W DC power module ((6 × 1W) + (8 × 1.3W) + (2 × 3W)), it can be used stably.
- The T connection module is a necessity for device branching. The power consumption is close to zero.

**2) Composition of ACB+Smart MCCB+M LINK panel**

- If ACB 1EA, Smart MCCB 3EA, M LINK 4EA and Panel HMI (3.5 inch) 1EA are connected to 24W DC power module (5W + (3 × 1W) + (4 × 1.3W) + 3W), it can be used stably.
- The T connection module is a necessity for device branching. Power consumption is close to zero.

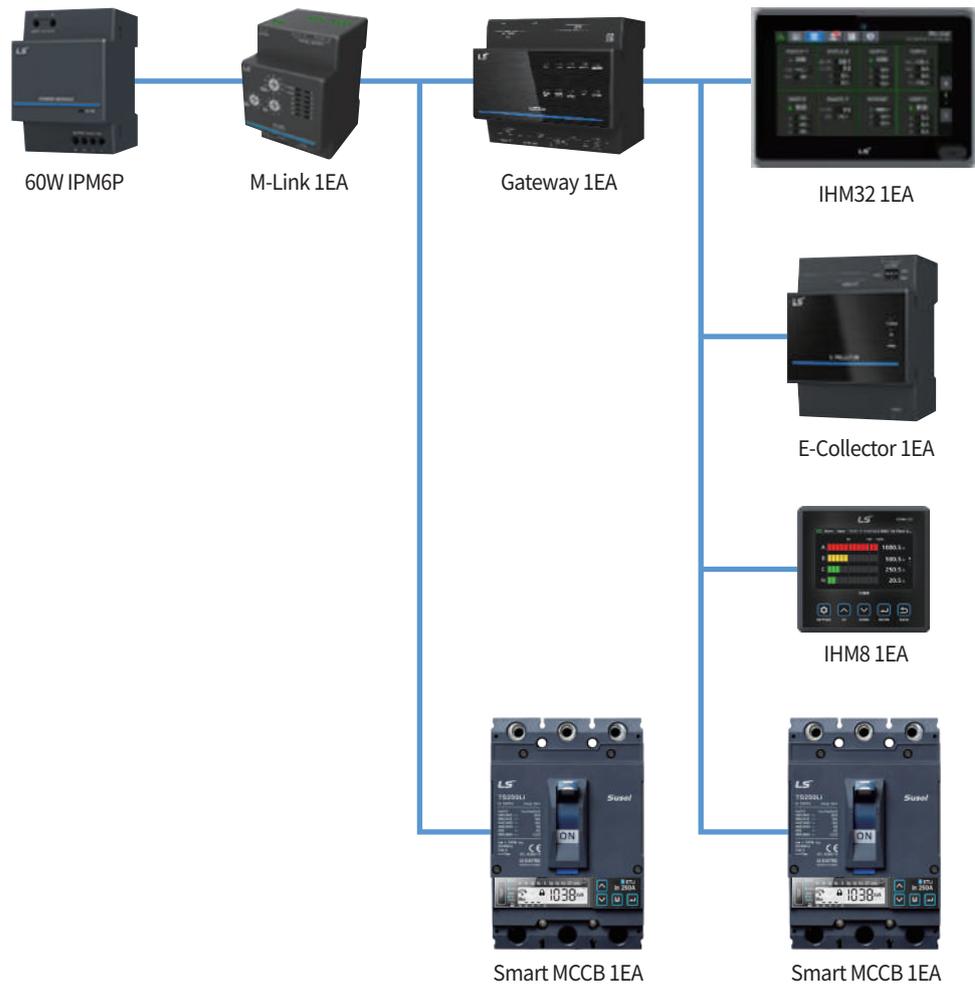

# External accessory

## DC Power Module

### Product combination (example)

#### 3) Smart LV Feeder panel composition

- Use 60W IPM6P to compose a Smart LV feeder panel. The sum of the power consumption of M-Link and gateway, IHM32, E-collector, IHM8, and Smart MCCB 2EA is  $(1.3W + 11W + 23W + 5W + 3W + 1 \times 2W)$  45.3W, which will enable using the system in a stabilized manner.
- ITCM is a required item for branching the product, and the power consumption is almost 0.

4) You can make different combinations of LV panels to fit your purpose.

**User Precautions (Danger)**

- ※ Make sure that the upper-level breaker is OFF when installing or maintaining the product.
  - There is a risk of serious injuries or even death due to electrocution.
- ※ Do not contact the exposed part of the terminals while the system is energized.
  - There is a risk of serious injuries or even death due to electrocution.

**Check before use**

- ※ Make sure the specification of the product matches the specification of your order.
  - If the ratings of the product are different, it may result in burn damage of the product or a fire.
- ※ Check for loose/dislocated items or damages during transportation.
  - Product damages may lead to a failure or a malfunction.
- ※ To install or maintain the product, make sure the job is performed by a qualified technician.
  - Erroneous installation or maintenance work may result in a malfunction or an accident.

**User Precautions (Caution)**

- ※ Make sure that the power cable is connected to the INPUT.
  - An erroneous wiring can result in damage to the product.
- ※ Make sure to use the rated input voltage indicated on the product.
  - An incorrect input voltage may damage the product.
- ※ The input/output lines must be separated from a high-voltage cable or a power cable by at least 10cm so that the equipment is not affected by noises or fluctuations of magnetic fields.
  - Erroneous installation or maintenance work may result in a malfunction or an accident.
- ※ Do not disassemble or modify the product unless you are authorized to do so.
  - This may result in a failure or a malfunction, even injuries or a fire.
- ※ Operate the product within its operating temperature range.
  - Otherwise, the product may be damaged, or the performance may be affected negatively.

# External accessory

## i-Tester

The i-Tester (Intelligent Tester) is an accessory to test-drive ACB/MCCB. As a stand-alone type, it not only performs various relay tests such as manual/auto/user tests, but also has various functions such as self-calibration function, device information setting, relay setting, and device status checking. In addition, it supports 256×128 graphic LCD and supports not only English but also Chinese and Russian languages. It has the function to output the test and test results in the same way using the upper Manager S/W.

### Features

- **Calibration function**
  - The calibration function of i-Tester is used to calibrates the error using the output value set in i-Tester and the measurement current data.
- **Device H/W setting function**
  - It consists of the part to set the system configuration and time of the device and the part to set the language and time of the i-Tester itself.
- **Relay setting function**
  - It consists of the part to check the current relay element of the device and the part to set the relay.
- **Relay test**
  - As a part for testing the relay, it is composed of manual/automatic/user tests so that various relay tests can be conducted.
- **Control function**
  - It provides a function to clear or reset the device data and to control DO and CB.
- **System information**
  - It consists of the device information, relay status, and tester system information.
- **Test history**
  - It consists of a part to check the test history stored in i-Tester and a part to delete the saved history information.

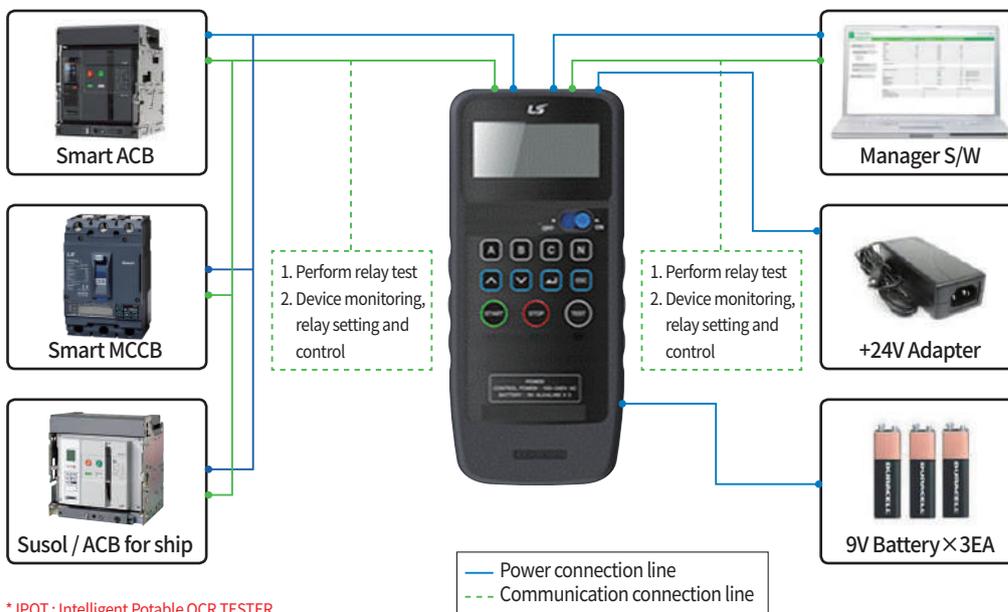

### Specification

Type	Details
Model name	IPOT
Rated voltage	DC24V adapter, 9V alkaline battery 3EA, USB or rechargeable battery (10000mAH or more)
HMI	Graphic LCD module( 256×128 Graphic LCD)
Supported language	English, Chinese, Russian
Key functions	<ul style="list-style-type: none"> <li>· Device information checking function (information, DI, DO, self-diagnosis)</li> <li>· Relay and H/W information setting function</li> <li>· Device control and reset function</li> <li>· Relay test function                             <ul style="list-style-type: none"> <li>- Manual/auto/user test function</li> </ul> </li> <li>· Test history storage (up to 255) and output (PDF) function</li> </ul>
LCD composition	Navigation TREE configuration for all
Size	98(W)×210.5(H)×43.5(D), unit : mm

Exterior description

Type	Details
① Power switch	Power On/Off function
② LCD	256×128 graphic LCD
③ KEY PAD	Menu navigation, setting and operation buttons
④ Adapter terminal	DC24V power input terminal
⑤ USB terminal	USB communication connection terminal (USB2.0)
⑥ Signal port	Signal terminals for device testing
⑦ Battery	Equipped with 9V alkaline batteries (×3ea)

Device usage example

Target device

Circuit breaker	Smart ACB(STU), Susol/Metasol ACB(OCR), Smart MCCB, TS1600
-----------------	--

# External accessory

## Portable Battery & Trip Module

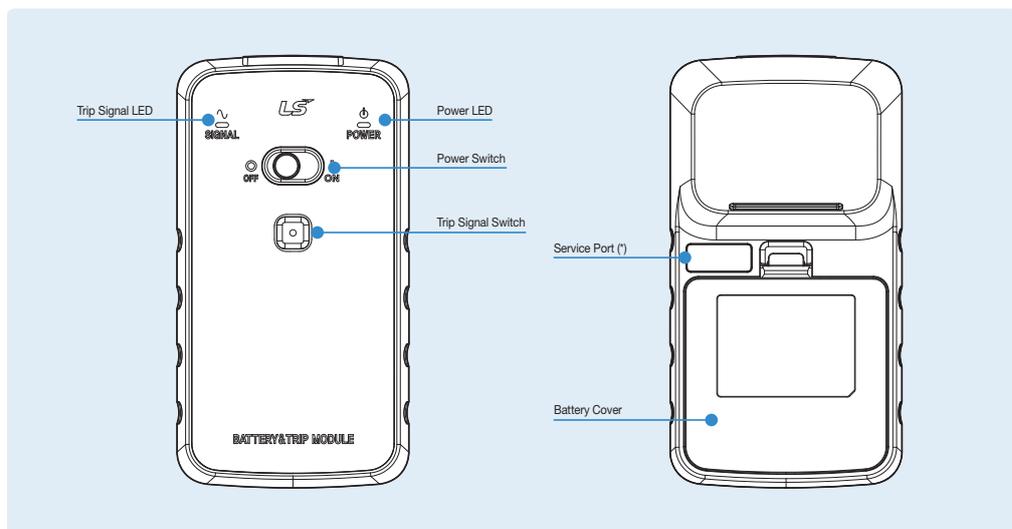

It is a portable battery module that can power the Smart MCCB and test the trip function. The user can change and check the settings by applying power to the Smart MCCB while carrying this device, and easily check the trip function, which is the most important function.

### Specification

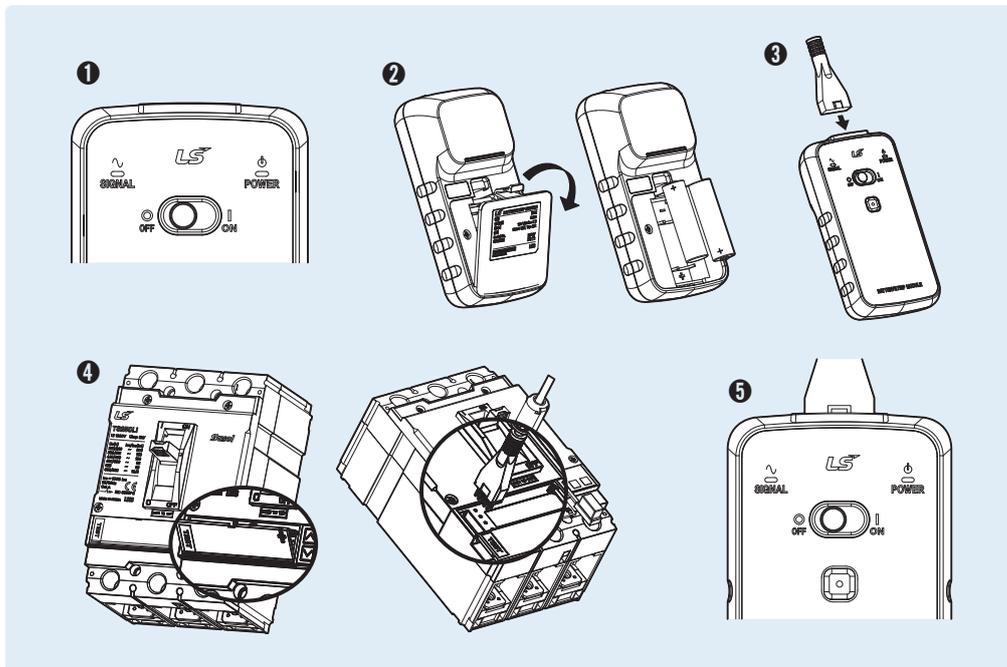

Type		Details
Target device		Smart MCCB
Input power		AA size serial battery 2EA (battery specification : DC1.5V)
Output	Power supply	DC 12V(±5%)
	Trip signal	AC 0.9V, 60Hz(±15%)
Device operating time (battery replacement time)		More than 8 hours of continuous use ※The usage time can be changed depending on the battery capacity
Switch	Power supply	Slide switch, power supply On/Off
	Trip signal	Tact switch, Trip signal On/Off
LED	Power supply	Orange, DC 12V output status display
	Trip signal	Green, AC 0.9V Trip signal output status display
Size		72(W) × 135(H) × 34.5(D)

### Exterior description

### Operation method

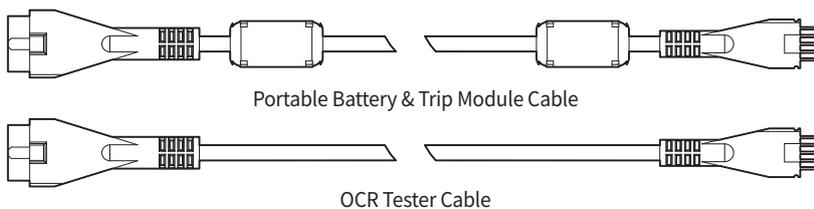

- ❶ Check the power switch off status of the portable battery module.  
※ If the battery is connected while the power switch is on, an error may occur in the device.
- ❷ Open the battery cover on the back and install 2EA of AA size batteries.
- ❸ Close the battery cover and connect the tester cable.
- ❹ Open the glass cover of Smart MCCB and connect the Tester cable to the TEST port.  
※ If the direction of the tester cable does not match, an error may occur in the device.  
※ If the Tester cable is connected while the power switch is on, an error may occur in the device.
- ❺ Operate the power switch of the portable battery module to On.  
- Check that the power is turned on to the Smart MCCB,  
and check and operate the Smart MCCB settings using the Smart MCCB key.  
- The Trip test of Smart MCCB can be performed using the Trip button of the portable battery module.
- ❻ After using the portable battery module, operate the power switch to the Off status.

### Tester Cable

The test cable is used to connect a portable battery module and a Smart MCCB.

### Tester Cable Specifications

Model name	Items	length
Portable Battery & Trip Module Cable	Apply filter beads	1M
OCR Tester Cable	Exclude filter beads	

### User Precautions (Danger)

- ※ If the power supply LED is not turned on after turning on the power switch, replace the battery.
- ※ Be mindful of the direction of the tester cable when using one.
- ※ Tester cables are sold separately.

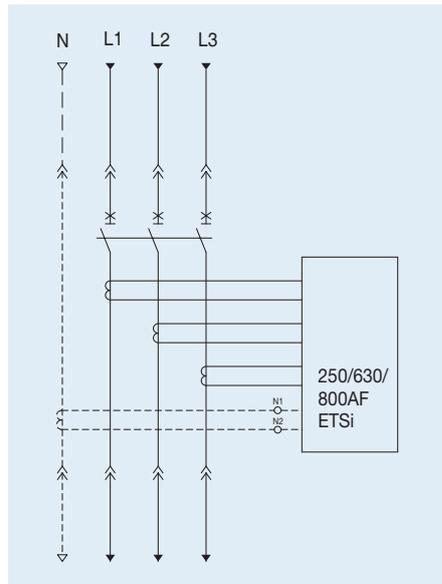

# Wiring diagram

## Wiring diagram (State of operation)

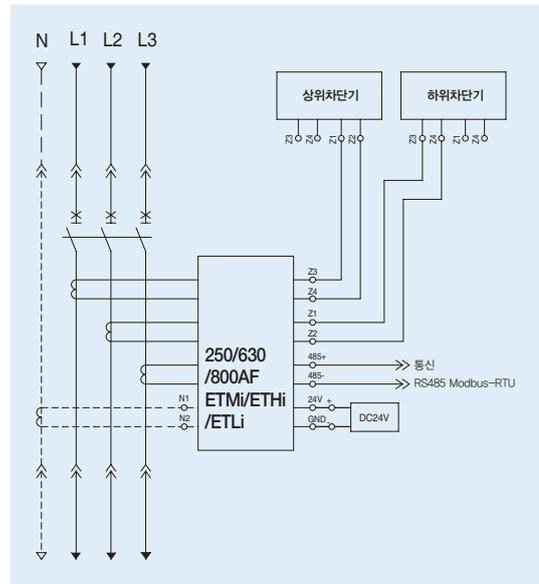

ETSi  
ETMi  
ETHi  
ETLi

The diagram is shown in the following conditions:

- Fixed version circuit-breaker (depending on type of circuit-breaker)
- Circuit breakers open.
- Releases not tripped

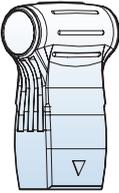

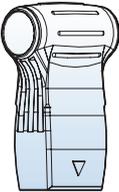

Three-pole circuit-breaker with  
250/630/800AF ETSi electronic release

Three-pole circuit-breaker with  
250/630/800AF ETMi/ETHi/ETLi electronic release

The following accessories for mounting, connection, insulation, handle operation are standard items and are packed with Susol TS series circuit breakers.

	Screw for connection of terminals, Spreader	Screw for mounting	Nut for mounting	Insulation barrier	Auxiliary handle
TS100 TS160 TS250	 M8×20 3P: 6pcs 4P: 8pcs	 M4×75 3P: 2pcs 4P: 4pcs		 B-23C 3P: 4pcs 4P: 6pcs

## Fixed mounting

Susol TS circuit-breakers can be directly connected to the mounting plate. If busbars or terminals are used to connect the circuit breaker on the back of the mounting plate, the appropriate safety clearances must be observed.

	TS100, TS160, TS250	TS400, TS630	TS800

# Mounting & Connection (100~800AF)

## Connecting terminal & conductor

Breaker type	Terminal (mm)	Torque (mm)	Conductor (mm)
TS100 TS160 TS250		<p>Max 78kgf·cm</p>	
TS400 TS630		<p>Max 490kgf·cm</p>	
TS800		<p>Max 490kgf·cm</p>	

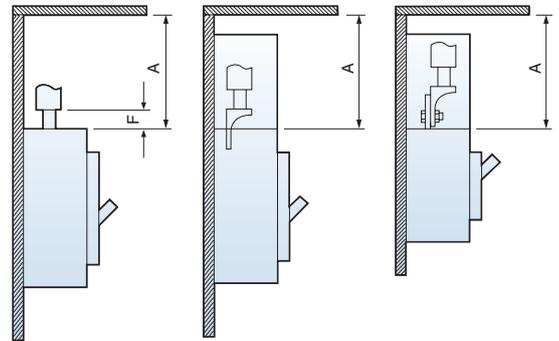

## Safety clearance

When installing a circuit breaker, safety clearances must be kept between the breaker and panels, bars and other protection devices installed nearby. These safety clearances are depend on the ultimate breaking capacity and are defined by tests carried out in accordance with standard IEC 60947-2.

When a short circuit interruption occur, high temperatures pressures are present in and above the arc chambers of the circuit-breaker. In order to allow the pressure to be distributed and to prevent fire and arcing or short-circuit currents, safety clearances are required.

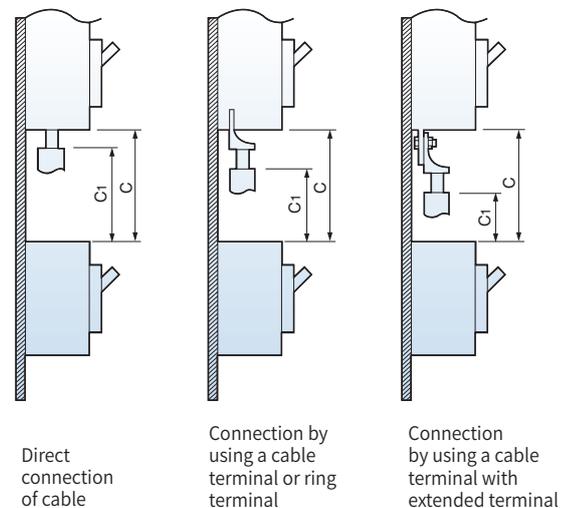

### A: Insulation distance to ceiling for installation in metallic cubicle

	A(mm)	
	415V	240V
TS100Ni, TS160Ni, TS250Ni	35	30

**Safety Instructions**

- For your safety, please read user's manual thoroughly before operating.
- Contact the nearest authorized service facility for examination, repair, or adjustment.
- Please contact qualified service technician when you need maintenance. Do not disassemble or repair by yourself!
- Any maintenance and inspection shall be performed by the personnel having expertise concerned.

- According to The WEEE Directive, please do not discard the device with your household waste.
